Introduction

Jira Permission and Security Management controls user access and the actions users can perform in a project.

Important Definitions

- **Permission Scheme:** Controls what users can do in a project.
- **Project Role:** Defines the role of a user in a project.
- **Permission:** Allows a user to perform a particular action.

10-A: View and Modify Project Permission Scheme

Objective

To view and modify the Project Permission Scheme.

Steps

1. Open the **ScrumOrbit** project.
2. Go to **Space settings**.
3. Select **Permissions**.
4. View the **Permission Scheme**.

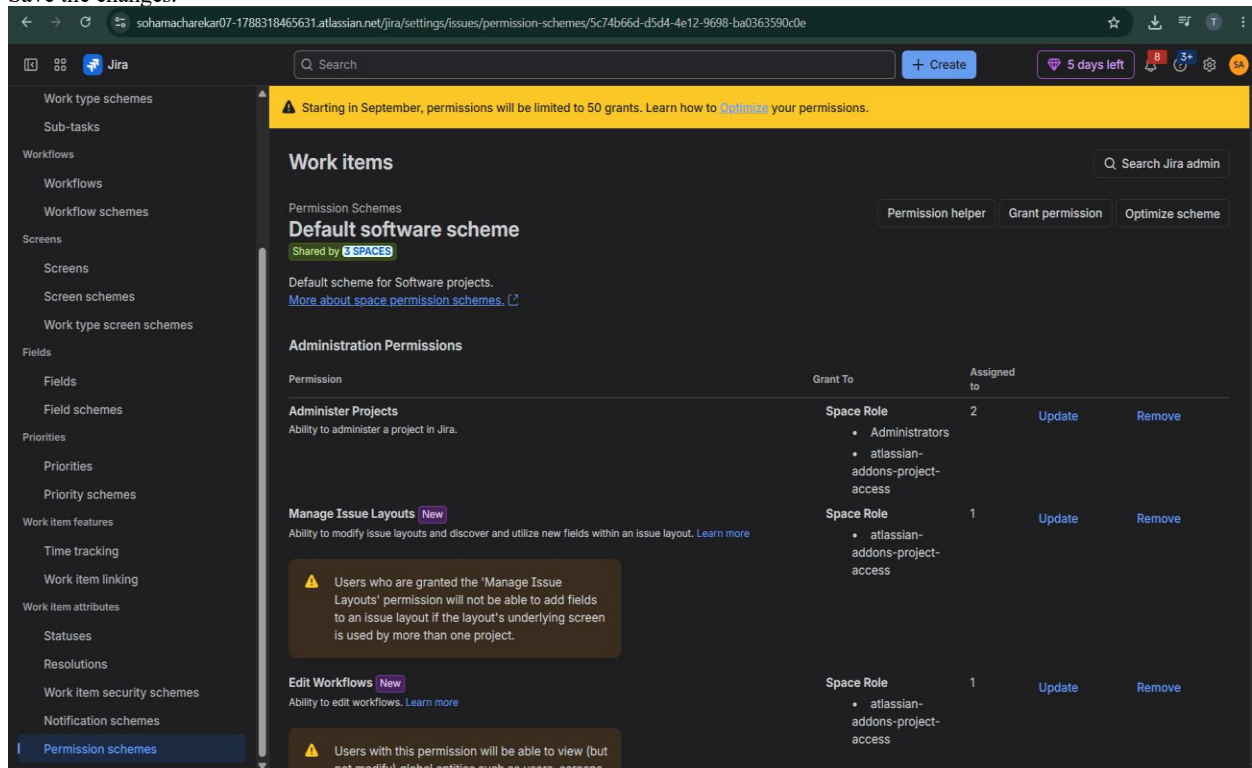

The screenshot shows the Jira 'Space settings' page for the 'Online Shopping Star' project. The 'Permissions' tab is selected, displaying the 'Default software scheme'. A yellow banner at the top indicates that starting in September, permissions will be limited to 50 grants. The page explains that project permissions define who can access a project and what they can do. It notes that the project is using the 'Default software scheme' and that permission schemes can be used by multiple projects. The page is divided into two main sections: 'Administration Permissions' and 'Project Permissions', each with a table of permissions, their assigned counts, and the users/roles they apply to.

Administration Permissions		
Administer Projects Ability to administer a project in Jira.	2	Space Role (Administrators) Space Role (atlassian-addons-project-access)

5. Check the available project permissions.
6. Click **Actions/Edit permissions** if modification is required.

This screenshot shows a close-up of the 'Actions' dropdown menu in the Jira interface. The menu is open, revealing two options: 'Edit permissions' and 'Use a different scheme'. The 'Edit permissions' option is highlighted with a blue border.

7. Modify the required permission.
8. Save the changes.

The Project Permission Scheme was successfully viewed and modified.
