Practical – III

Roll No.: T001	Name: Soham Acharekar
Class: TYIT	Batch: 1
Date of Assignment: 02/09/2026	Date/Time of Submission: 02/09/2026

Create and Configure Issue Types, Components and Versions in Jira

Aim

To create and configure different **Issue Types, Components, and Versions** in the **ProjectOrbits** project using Jira.

3A – Create and Configure Issue Types

Definition :

Issue Type:

An Issue Type in Jira represents the type or category of work being performed in a project.

Epic:

An Epic represents a large body of work that can be divided into smaller work items.

Story:

A Story represents a requirement or functionality that needs to be developed for the project.

Task:

A Task represents a specific piece of work that needs to be completed.

Bug:

A Bug represents a problem or defect that needs to be fixed.

Different types of work are represented differently in Jira. The practical identifies **Epic, Task, and Bug** as the available issue types and describes their purposes.

Kanban Board

Definition:

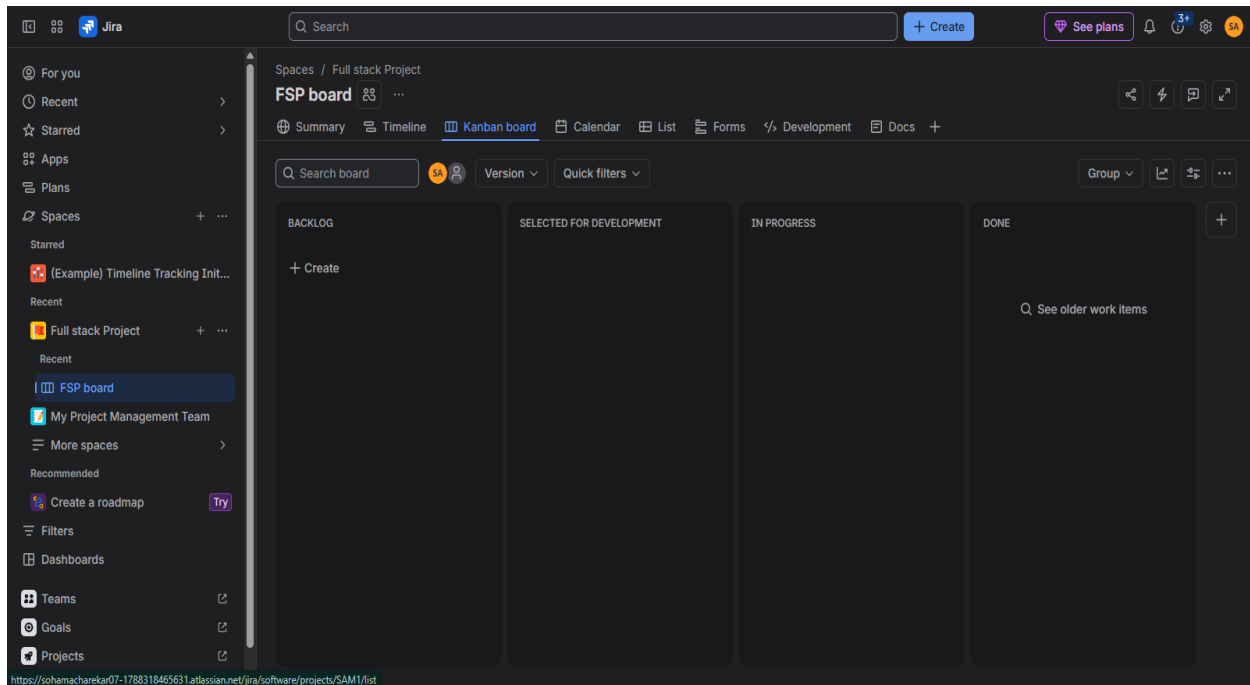

A Kanban Board gives a visual representation of the work being performed in the project.

The **ProjectOrbits** Kanban board contains the following stages:

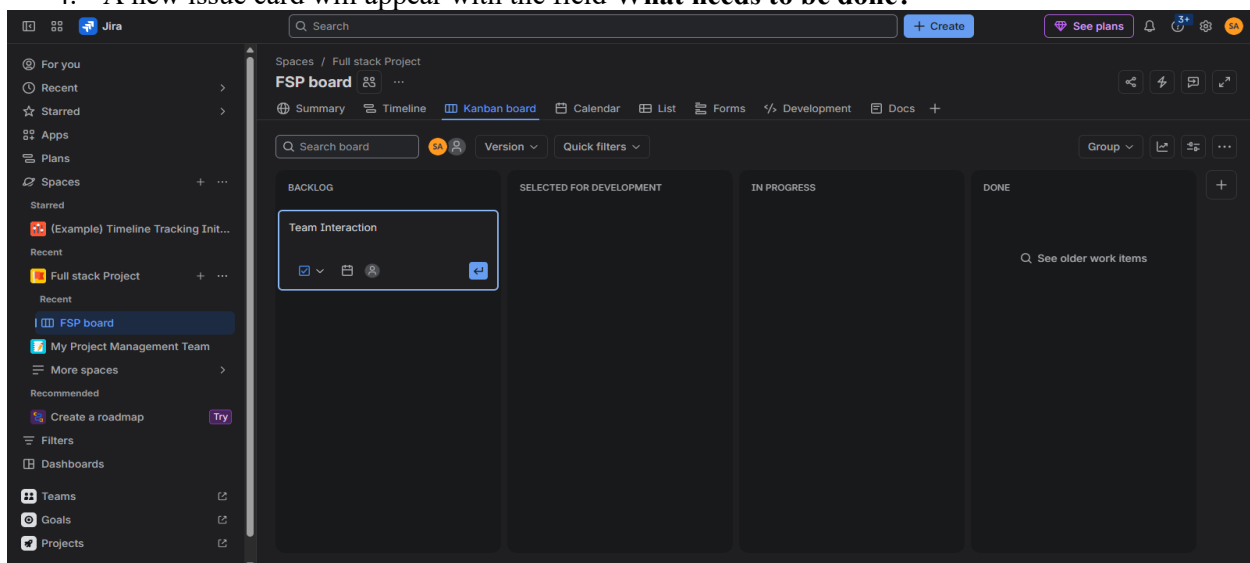

Backlog → Selected for Development → In Progress → Done

Steps

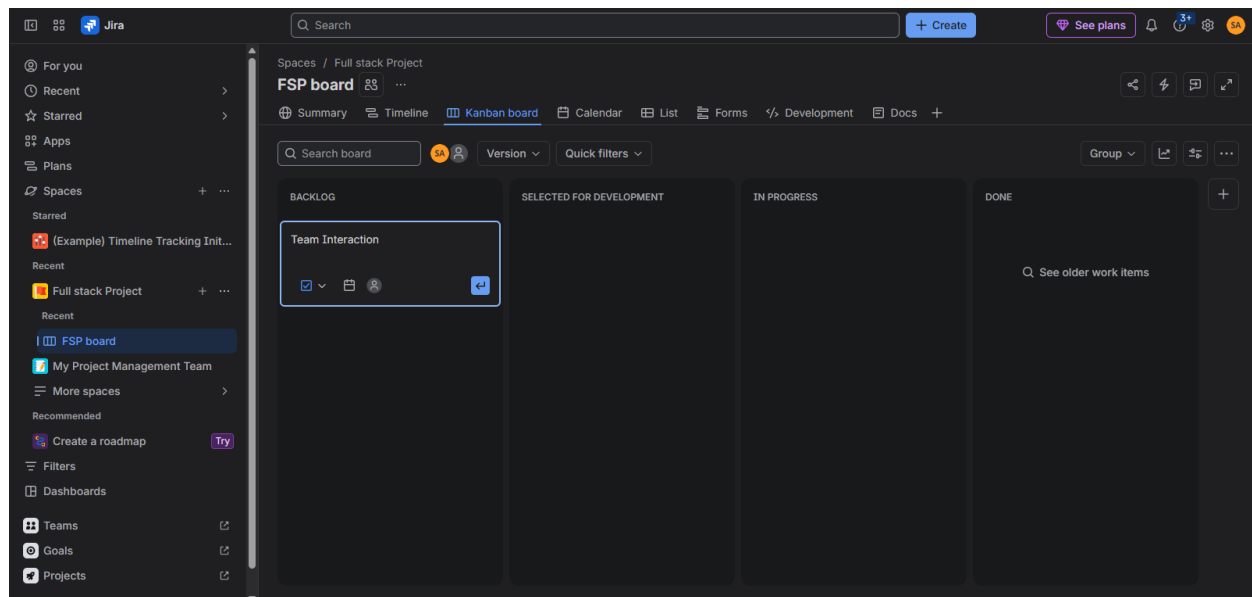

1. Open the **ProjectOrbits** board.
2. The Kanban board contains the following columns:
 - **Backlog**
 - **Selected for Development**
 - **In Progress**
 - **Done**

3. In the **Backlog** column, click **Create**.
4. A new issue card will appear with the field **What needs to be done?**

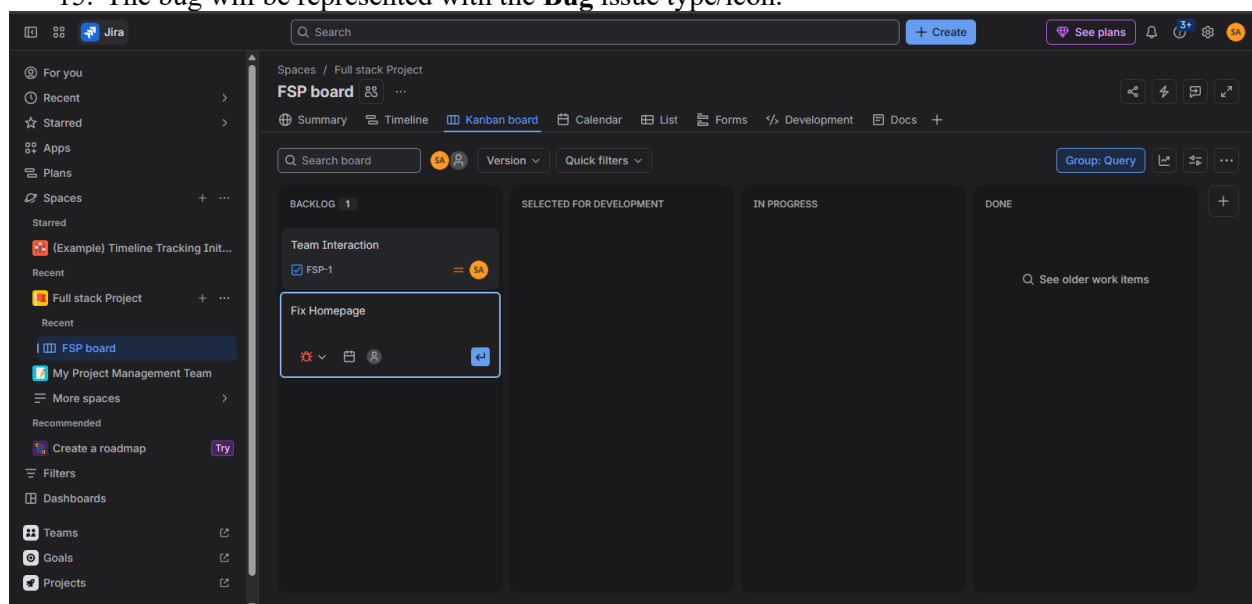

5. Enter the name of the work item.
Example: **Team Interaction**
6. Click the **Issue Type** icon/drop-down on the issue card.
7. Select the appropriate issue type from the available options:
 - **Epic**
 - **Task**
 - **Bug**
8. For a normal activity, select **Task** as the issue type.
9. Enter a suitable task name.
Example: **Team Interaction**
10. Click the **Create/Enter** button to create the issue.
11. The created task will appear as a card in the **Backlog** column.
12. Create another issue and select **Bug** as the issue type.
13. Enter a suitable bug name.

Example: Fix Homepage

14. Click **Create/Enter** to create the bug.

15. The bug will be represented with the **Bug** issue type/icon.

Quickstart

Important Points

- Issue Types are used to represent different types of work.
- **Epic** represents a large body of work.
- **Story** represents a requirement or functionality.
- **Task** represents a specific piece of work.
- **Bug** represents a problem or defect.
- The appropriate issue type should be selected according to the type of work.
- Created issues appear as cards on the Kanban board.
- The Kanban board visually represents the work being performed in the project.

3B – Create Components and Versions

Definition

Version:

A Version represents a release or stage of a project used to organize project releases.

Release:

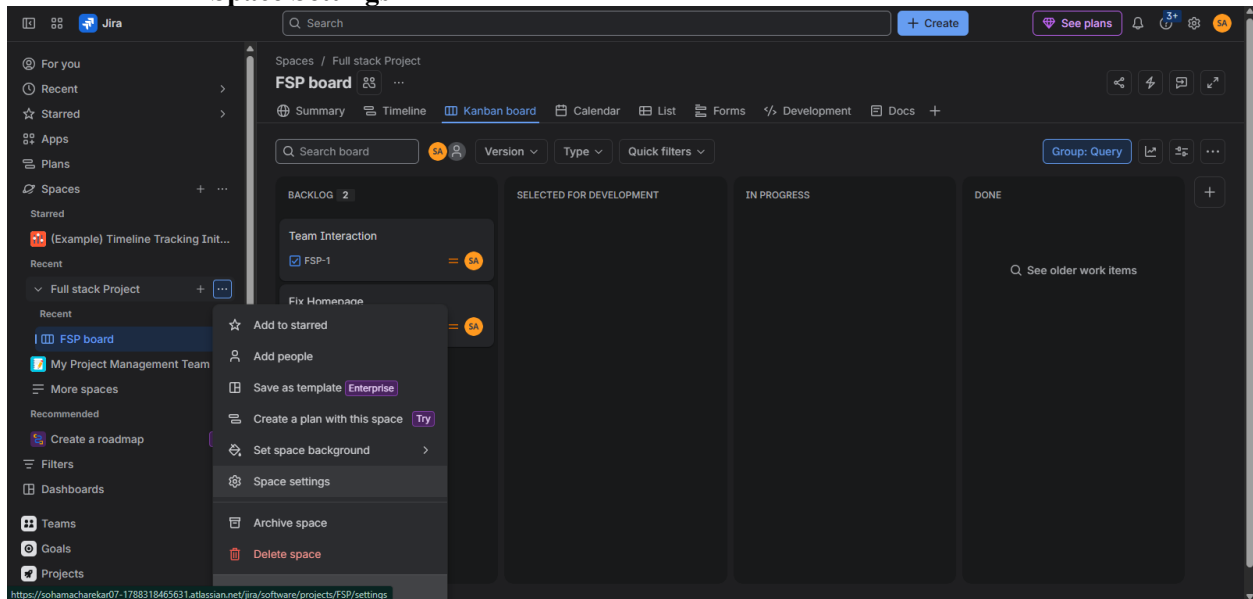

A Release represents a version of the project that can be created and managed from the project settings.

Component:

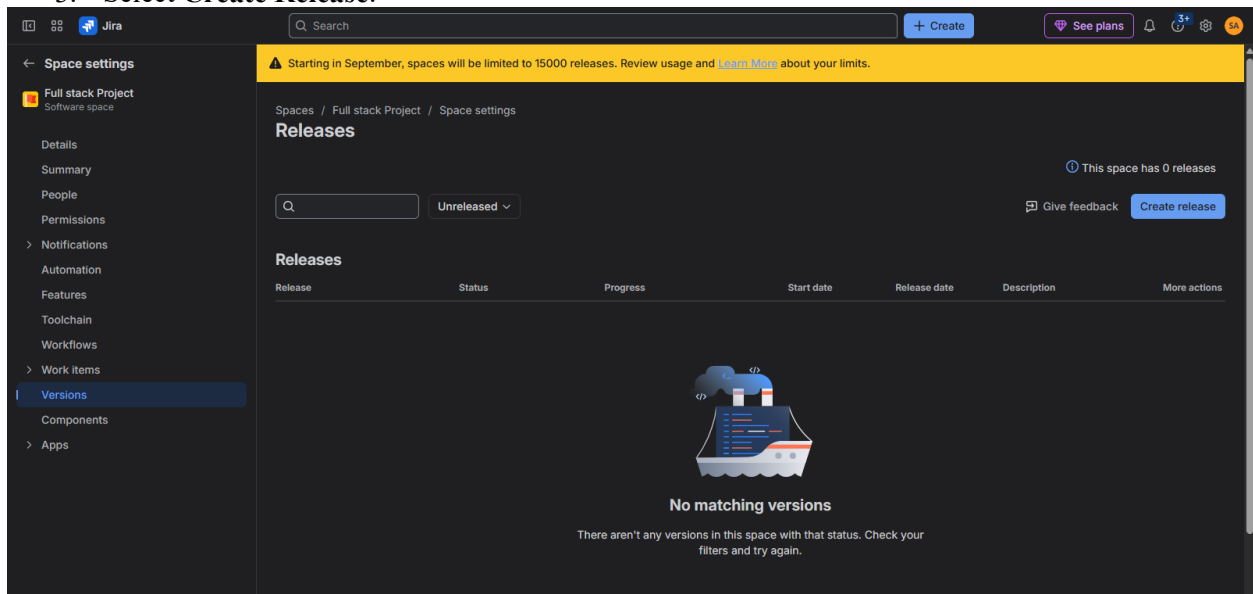

A Component represents a part or section of a project used to organize related project work.

Steps to Create a Version / Release

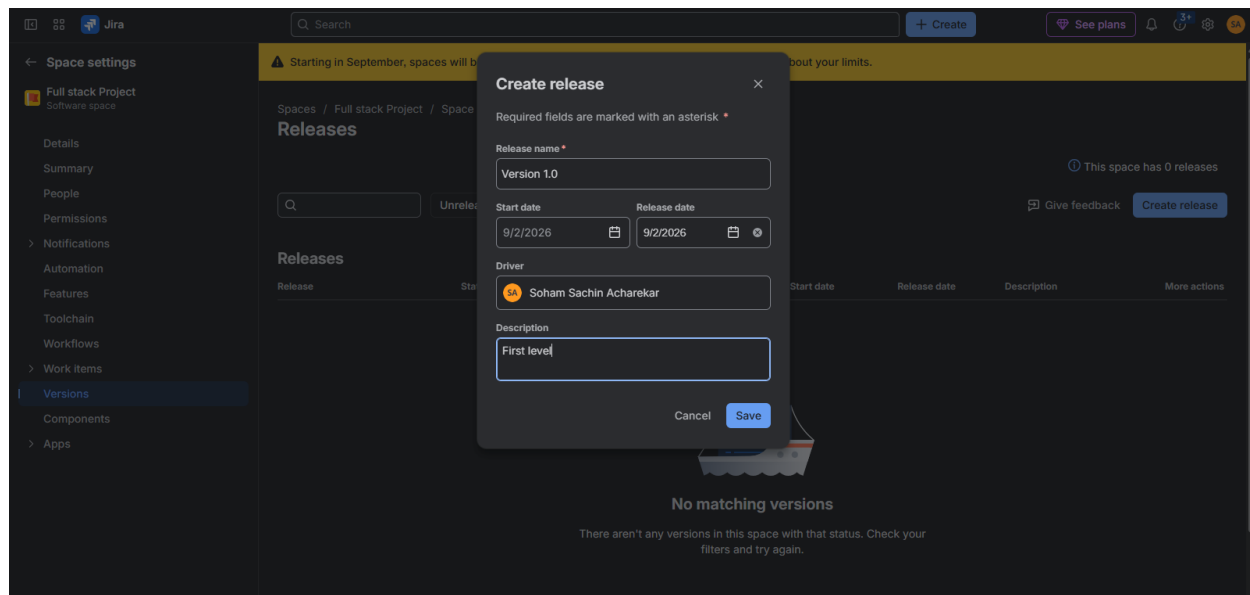

1. Open the **ProjectOrbits** project.
2. Click on **Space Settings**.

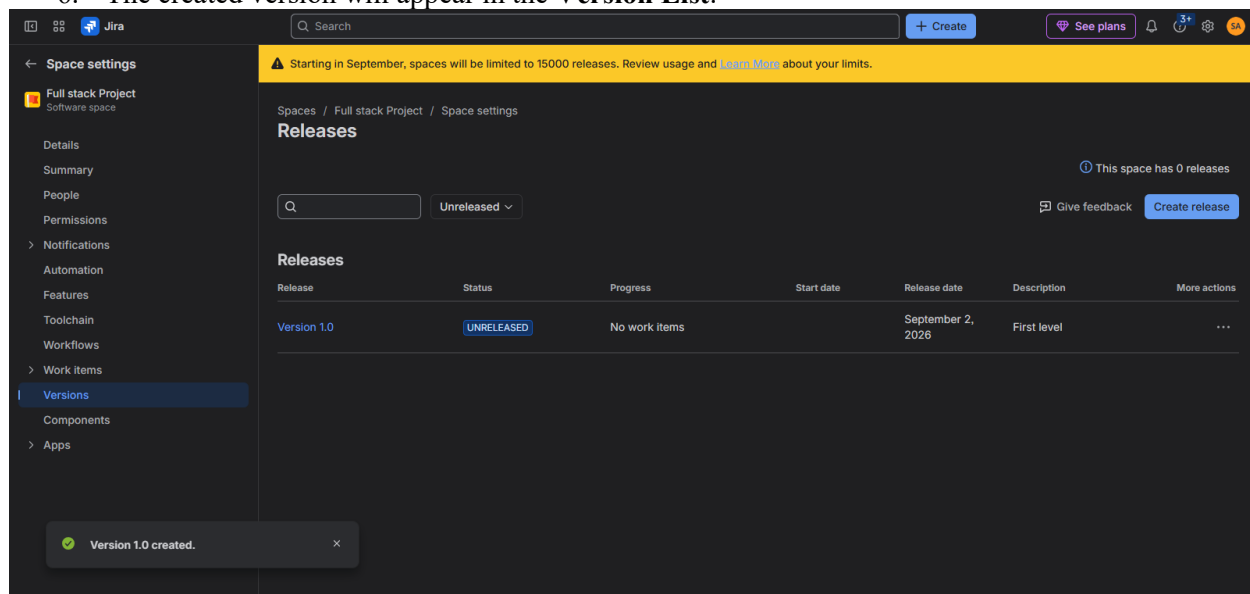

3. Select **Create Release**.

4. Enter the required details for the release.
5. Click **Save**.

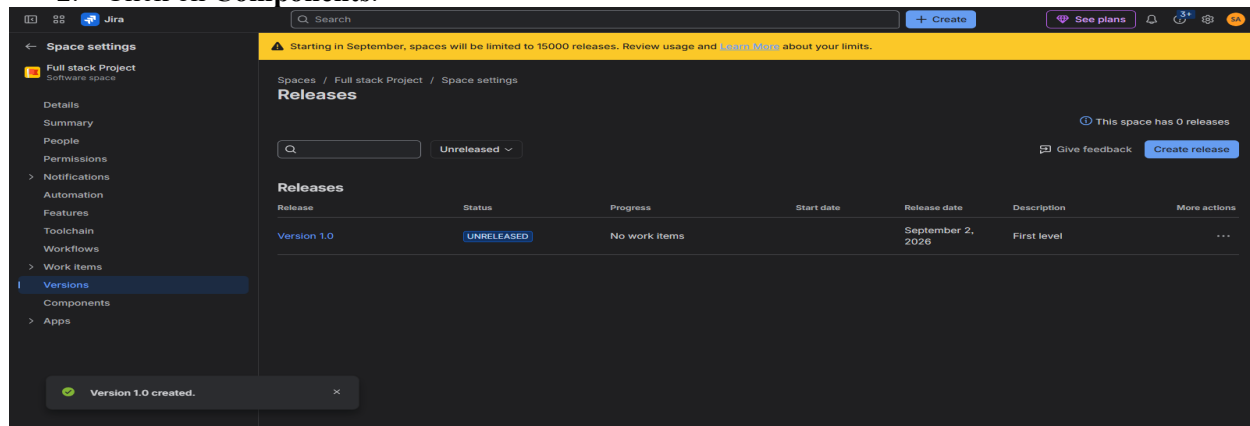

6. The created version will appear in the **Version List**.

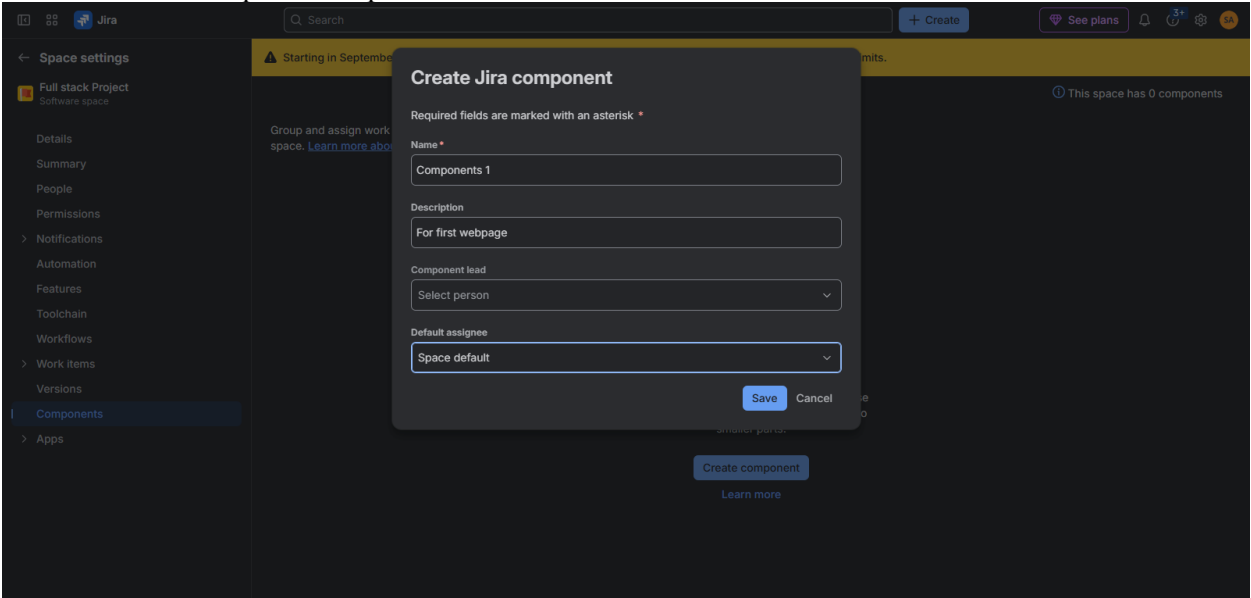

Steps to Create Components

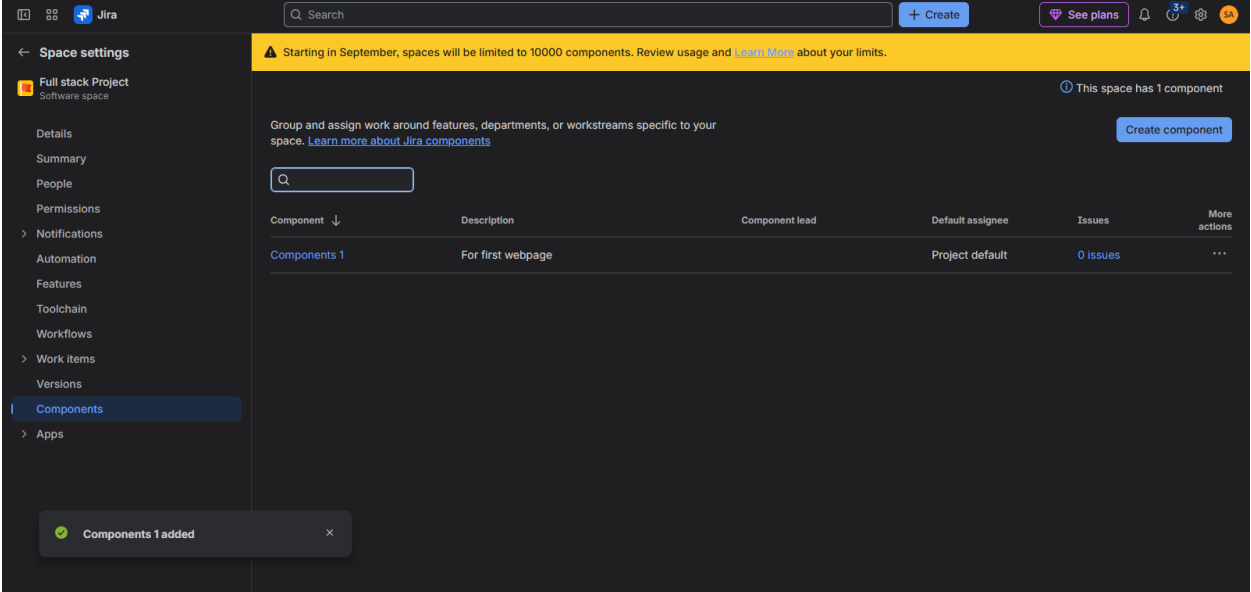

1. Open **Space Settings** of the **ProjectOrbits** project.
2. Click on **Components**.

- 3. Select **Create Component**.
- 4. Enter the required component details.

- 5. Click **Save**.
- 6. The created component will appear in the **Component List**.

The screenshots show the Jira 'FSP board' interface. The top screenshot displays the board with two issues: 'FSP-2 Fix Homepage' and 'FSP-1 Team Interaction', both assigned to 'Soham Sachin Achar...' with a status of 'Backlog' and 'Unresolved'. The bottom screenshot is identical but includes a 'Quickstart' button in the bottom right corner.

Important Points

- A **Version** is used to organize project releases.
- A **Release** can be created from **Space Settings**.
- Required release details should be entered before saving.
- After saving, the created version appears in the **Version List**.
- **Components** are used to organize related parts of a project.
- Components are created from the **Components** section.
- Required component details should be entered before saving.
- After saving, the created component appears in the **Component List**.
- Components and Versions help organize project work.

Result

Different **Issue Types** such as Epic, Story, Task, and Bug were created and configured successfully. A **Version/Release** and **Components** were also created in the **ProjectOrbits** project.

Conclusion

Thus, different Jira Issue Types were successfully created and configured, and the **ProjectOrbits** project was organized using **Components and Versions**.
