ARTIFICIAL INTELLIGENCE (AI)
(Module 2)
Practical – I

Roll No.: T001	Name: Soham Acharekar
Class: TYIT	Batch: 1
Date of Assignment: 29/08/2026	Date/Time of Submission: 29/08/2026

Prac 1 A – Create a Jira Cloud account and explore the dashboard.

Jira is a project management and work-tracking tool used to organize and monitor project activities. It allows users to create projects, manage tasks, track their progress, and collaborate with team members.

Jira provides different options according to the type of work being performed. During the initial setup, the user selects the type of work, such as project management, so that Jira can provide suitable templates and features.

A project/space in Jira acts as a common workspace where related work is organized. It contains the tasks, boards, team members, and other project-related information.

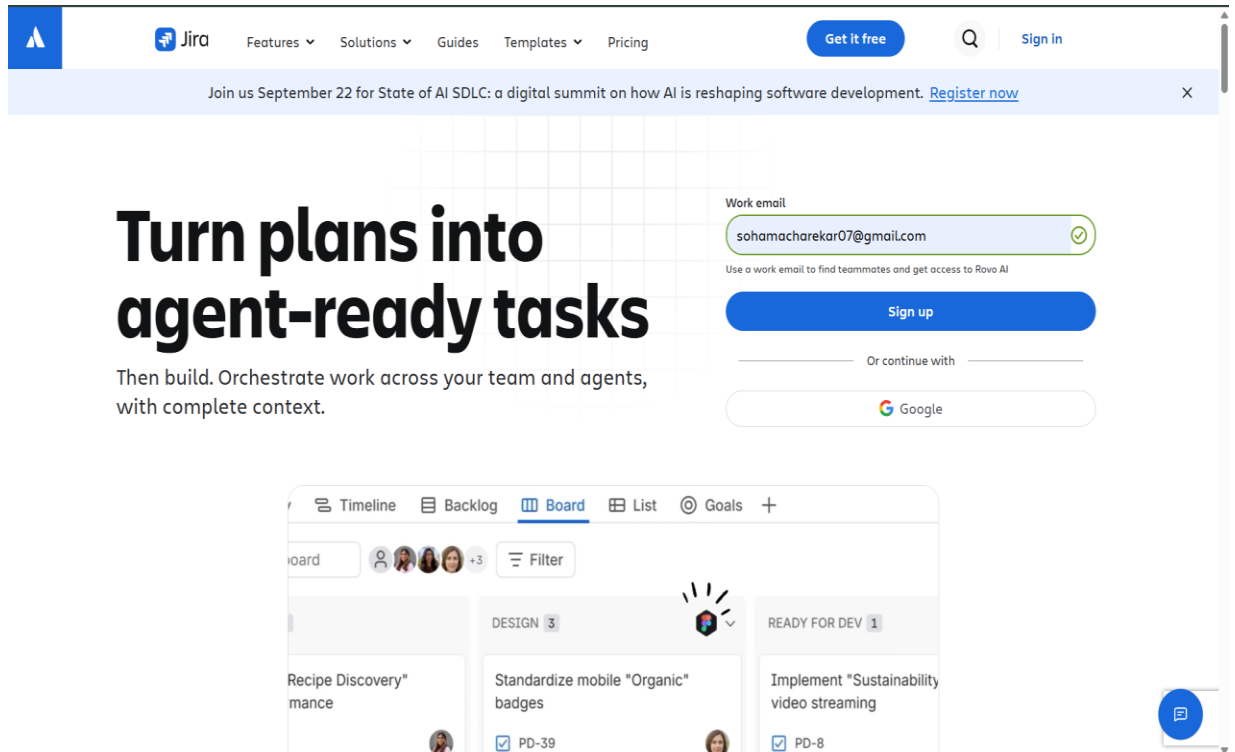

Jira also provides a Dashboard, which gives users an overview of their work and provides access to their projects and other Jira features.

Steps:

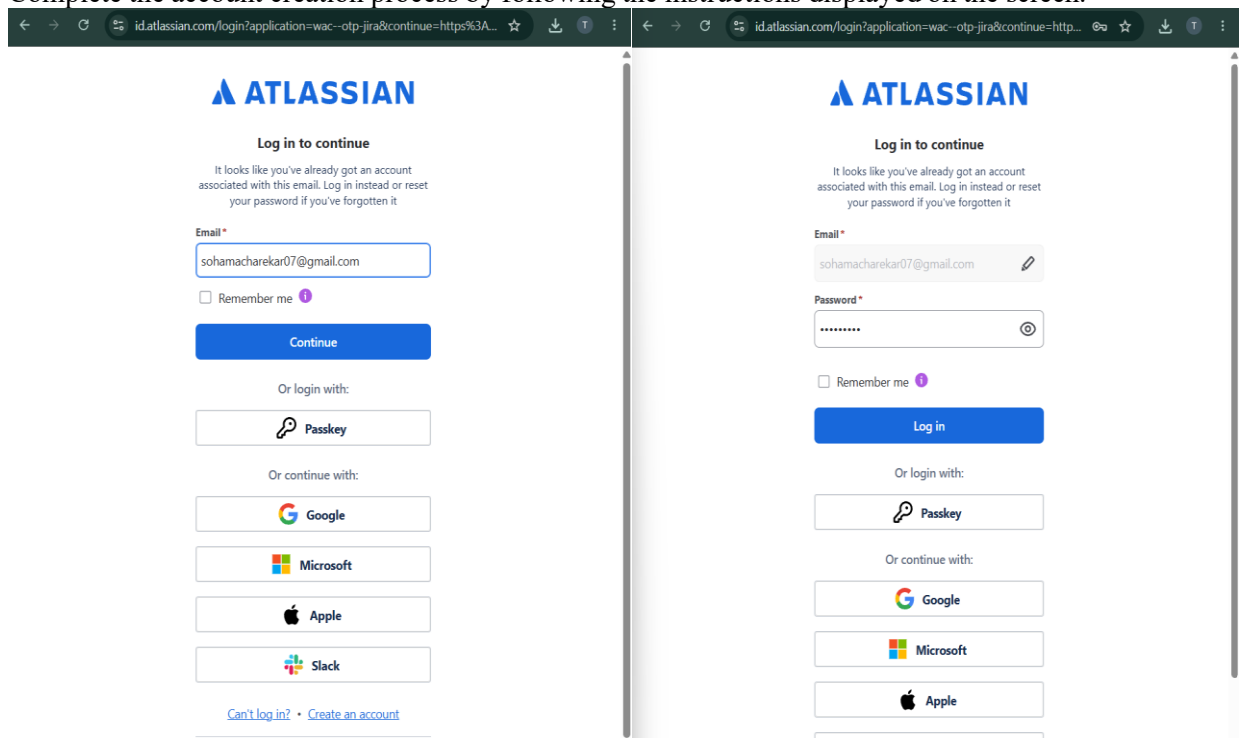

1. Open Google and search for Jira. Open the Jira website to begin the setup.

The screenshot shows a Google search for "JIRA". The search bar at the top contains "JIRA". The main search results area displays the Atlassian Jira website as the top result. The title is "Jira | Project Management for the AI Era". The description states: "Jira brings teams together to reach the next level of productivity with AI agents that orchestrate, plan, and track projects at scale." Below the description are several links: "Pricing", "Try Atlassian Cloud", "Jira Service", "Guides", "Features", and "Jira Service Desk". To the right of the main results, there is a sidebar with the Jira logo and name, a description of Jira as a software product developed by Atlassian, and a list of related programming languages (Java) and developers (Atlassian). At the bottom of the sidebar, there is a section titled "People also search for" with icons for Confluence, Trello, Slack, and Asana.

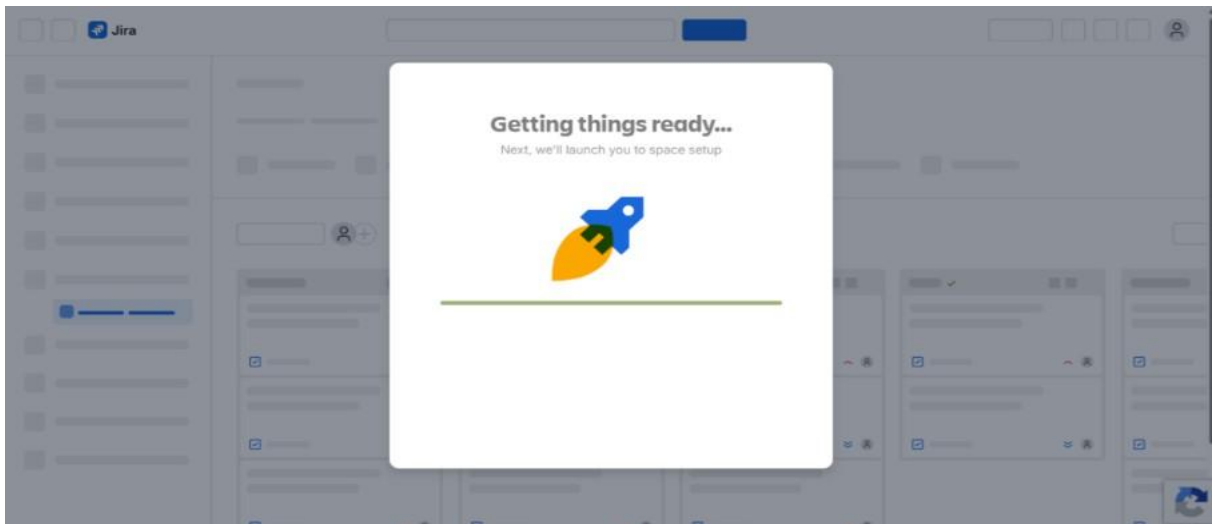

- Click on Google. Enter the required email/account details and click Continue to create or access your Jira account.

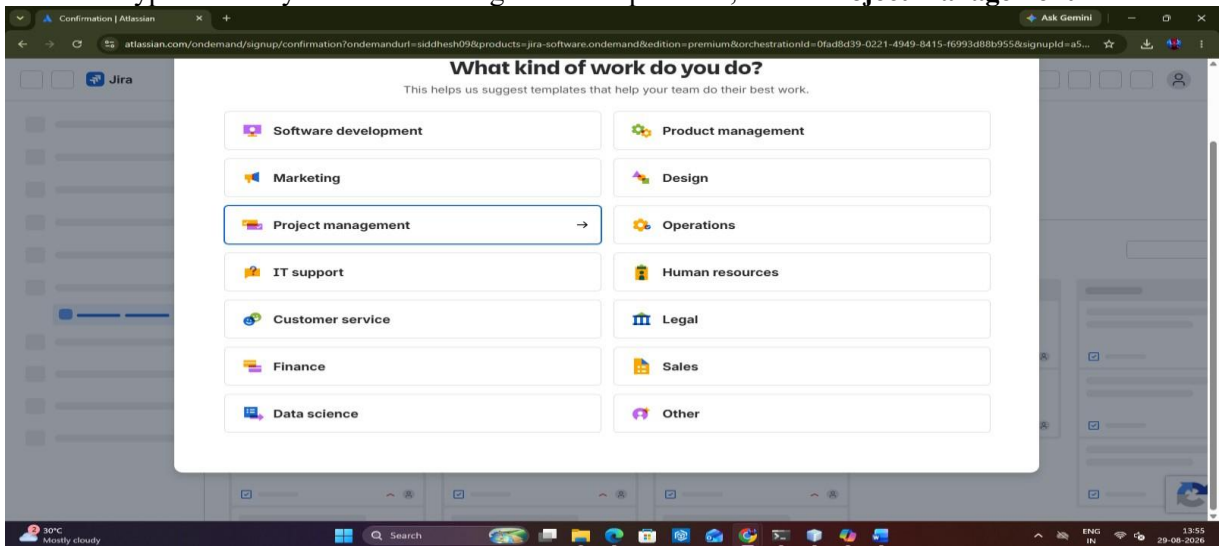

- Complete the account creation process by following the instructions displayed on the screen.

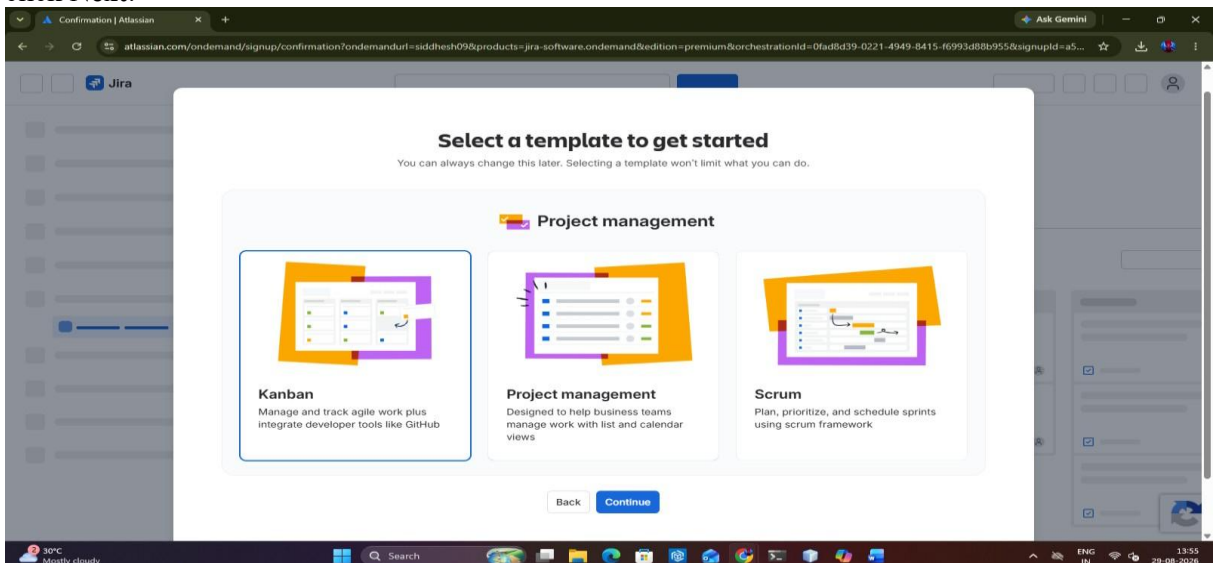

- Wait for Jira to complete the initial setup. The Getting things ready screen will appear.

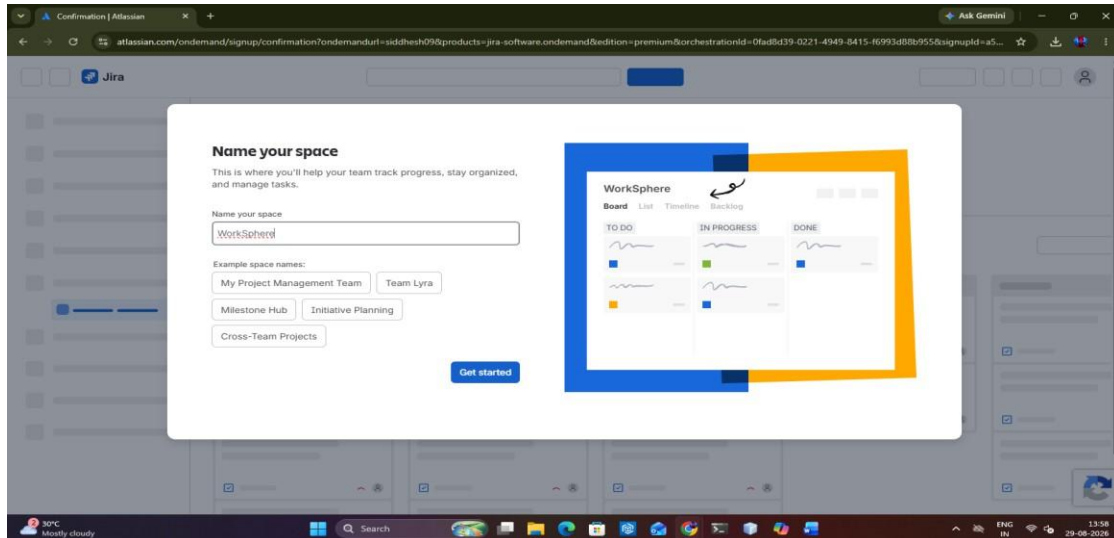

5. Select the type of work you want to manage. For this practical, select **Project management**.

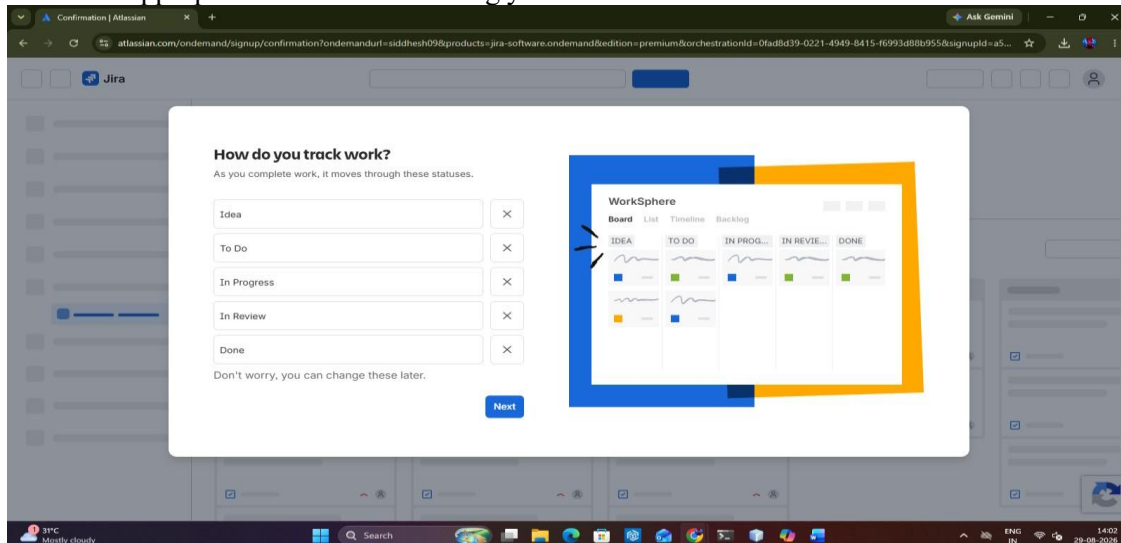

6. From the available project-management templates, select the required template that is **Kanban** and click **Next**.

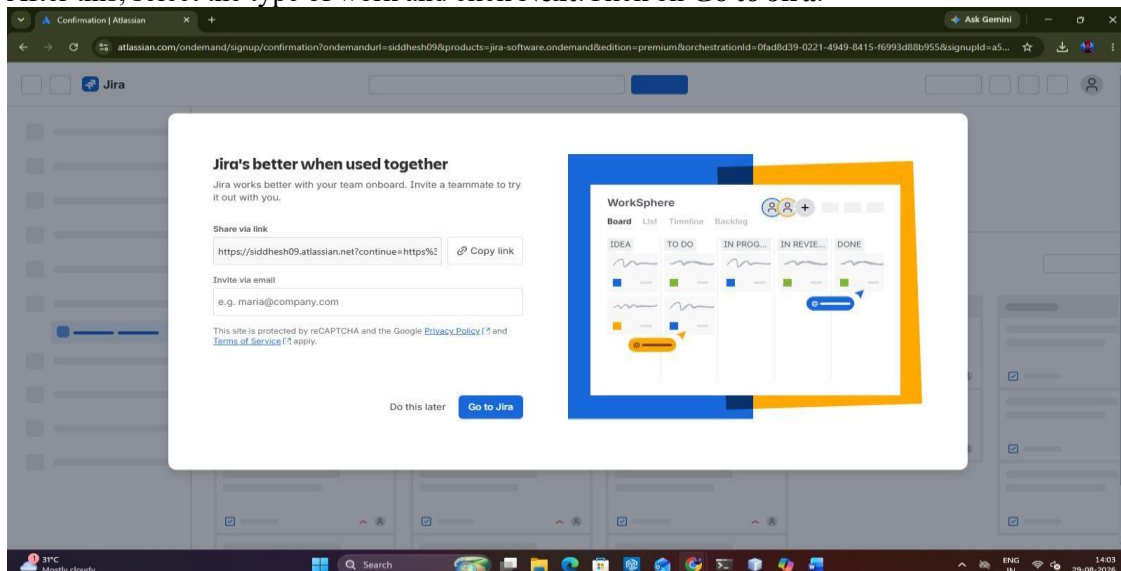

7. Enter a suitable name for your space/project in the **Name your space** field.

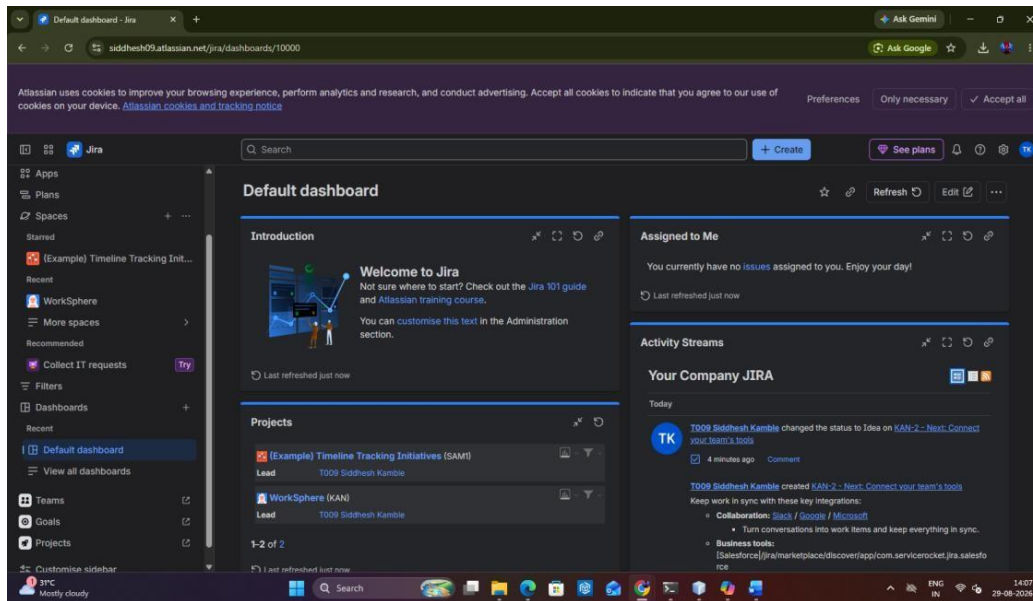

8. Select the appropriate method for tracking your work and click **Next**.

9. After this, select the type of work and click **Next**. Click on **Go to Jira**.

10. After completing the setup, the Jira Dashboard will appear. The dashboard provides access to your projects and work.

Practical 1B – Create a Company-managed Scrum/Kanban Project.

Kanban is a visual method of managing and tracking work. In Jira, a Kanban board represents work using cards and columns. Each card represents a task or work item.

The columns represent different stages of the work. A task can be moved from one column to another as its status changes.

For example:

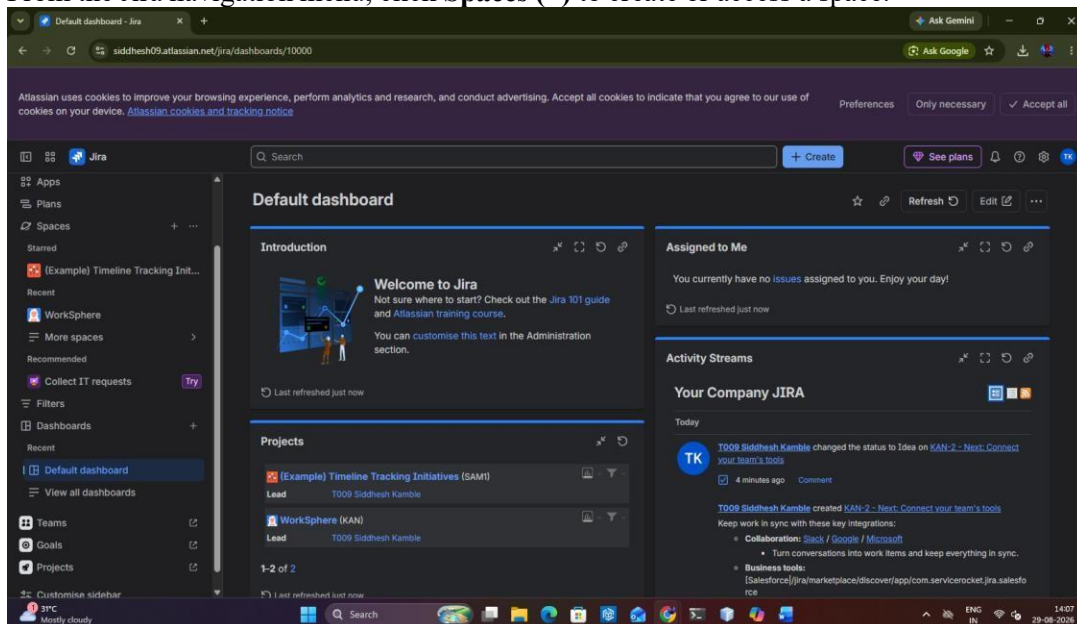

To Do → In Progress → Done

The Kanban template provides a ready-made structure for managing work instead of creating the complete workflow manually.

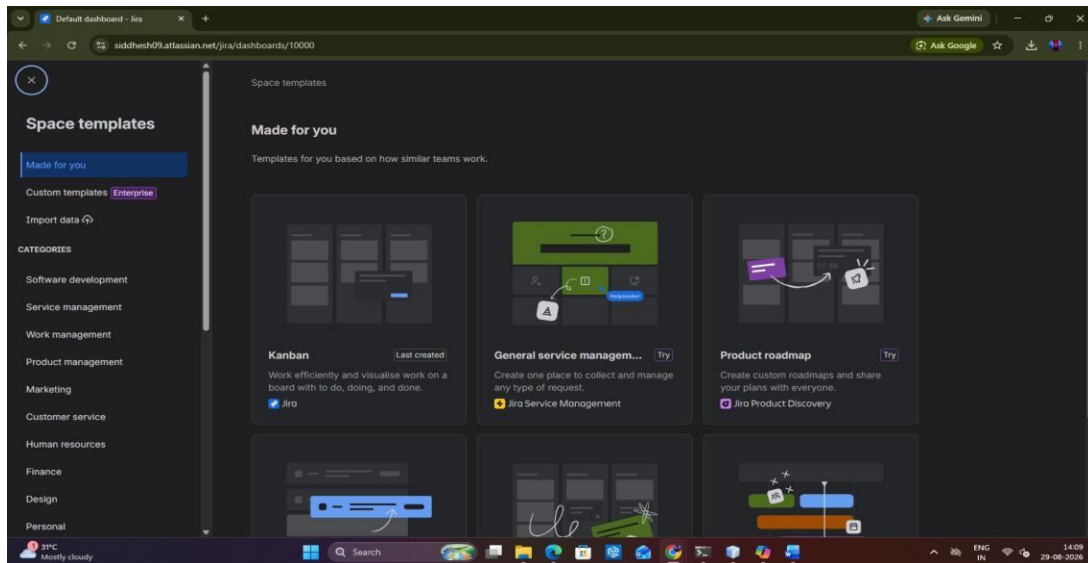

Jira also allows users to add team members to a space. This enables multiple people to participate in the same project and collaborate on its tasks.

Steps:

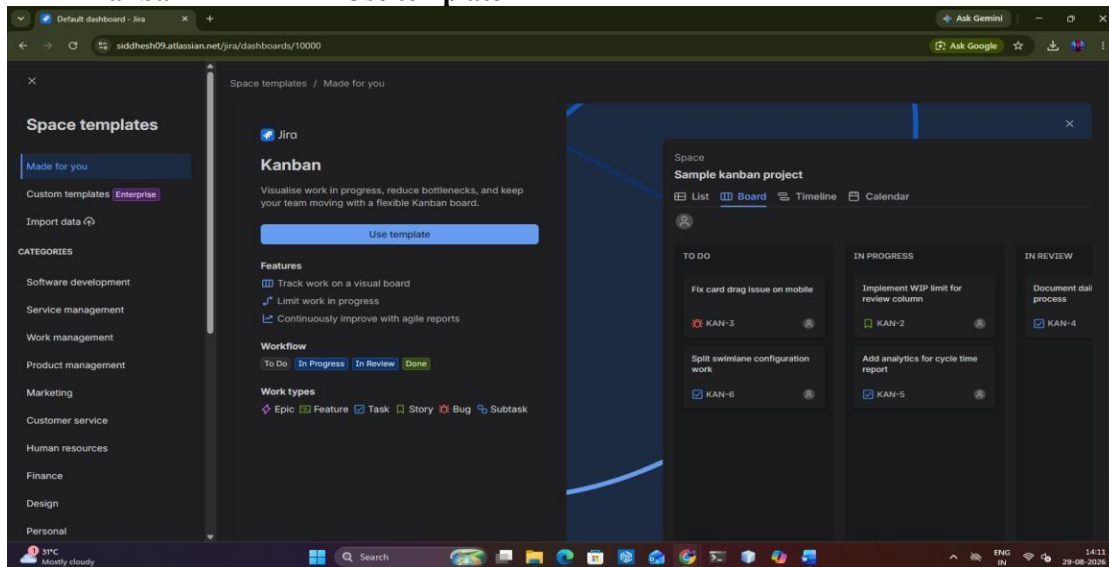

1. From the Jira navigation menu, click **Spaces (+)** to create or access a space.

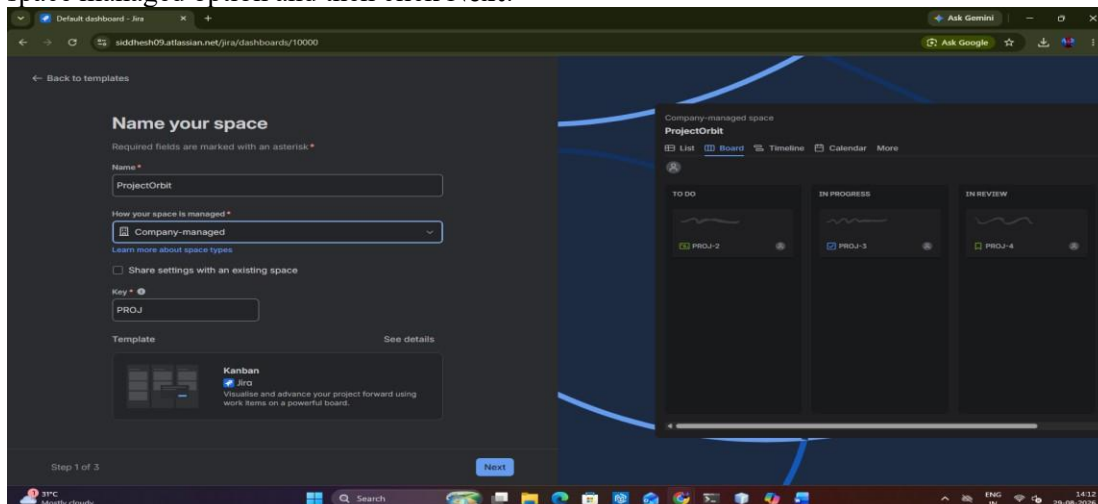

2. Select the **Kanban** template to create a Kanban-based project.

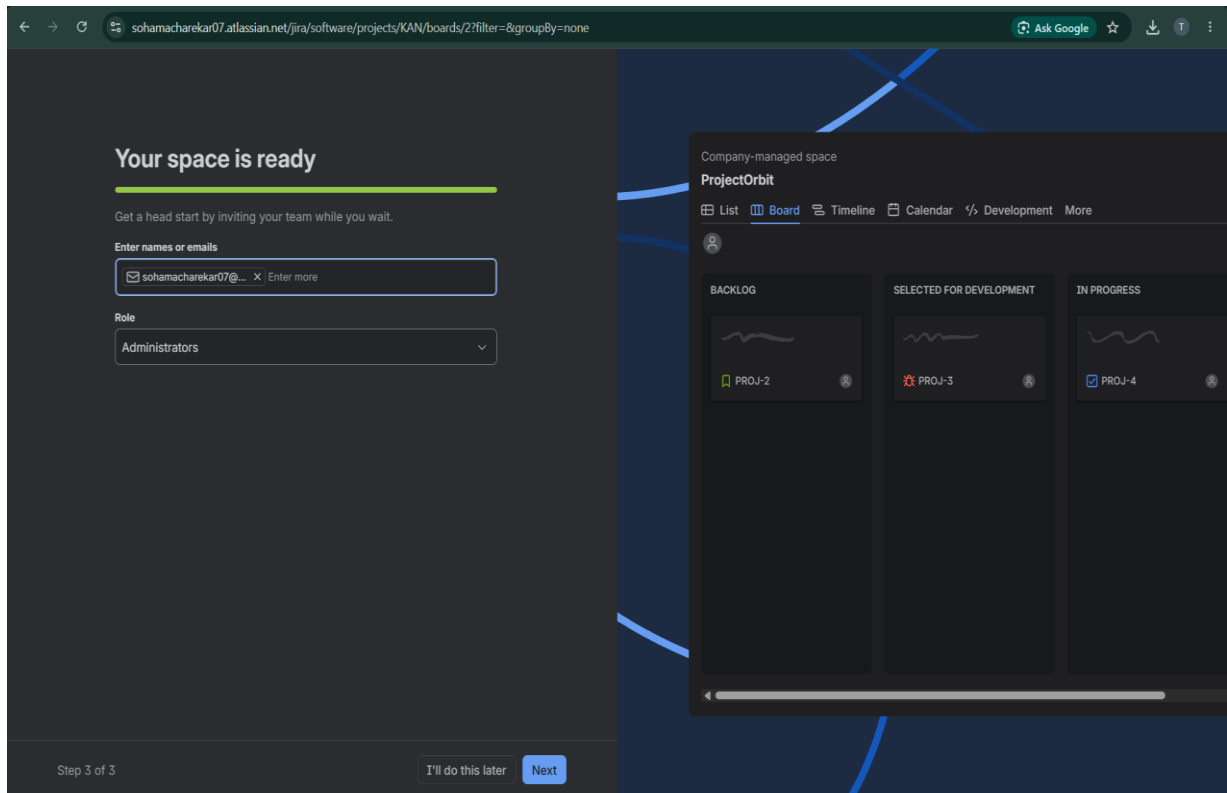

3. Select **Kanban** and click on **Use template**.

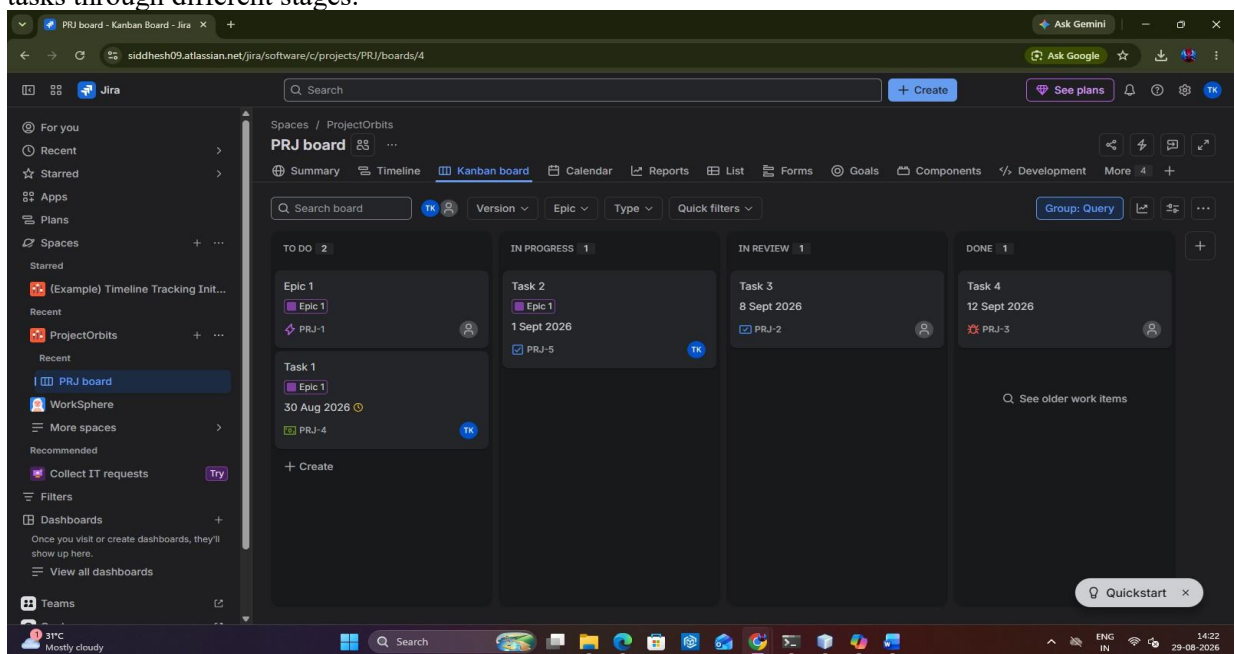

4. Enter the required **Space Name** and provide the necessary details. Select **Company-managed** in the space managed option and then click **Next**.

5. Enter the email addresses of the team members you want to add to the space. If you do not want to add members at this stage, select **I'll do this later**.

6. After completing the setup, the **Kanban Board** will appear. The board can be used to create and track tasks through different stages.

Prac 1C – Configure project details

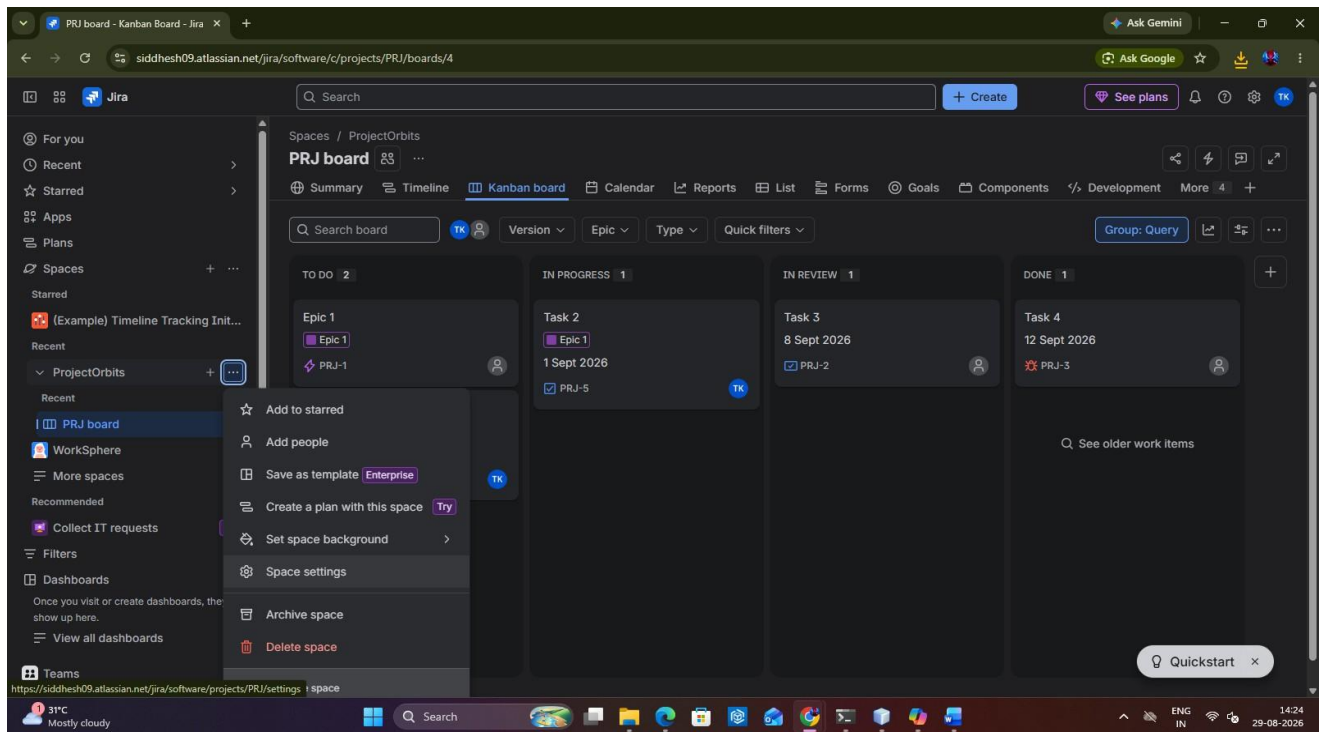

Space Settings provides options for viewing and managing the configuration of a Jira space.

After creating a space, users can open Space Settings to access information and configuration options related to that space.

The Details section provides basic information about the space. It helps users identify and understand the configuration of the created space.

Space settings are important because they provide a central location for managing different aspects of the project.

Steps: 1. Open the created Jira space/project from the navigation menu.

2. Click **Space settings** to access and manage the configuration options of the Jira space.
