Date of Assignment: 09/09/2026	Date/Time of Submission: 09/09/2026

Practical 5-A: Design a Custom Workflow**Objective**

To customize and add a workflow that defines the lifecycle of an issue by configuring statuses and transitions.

Theory

A custom workflow helps organize how issues move through different stages of a project. It can be created using an existing workflow template and associated with specific issue types.

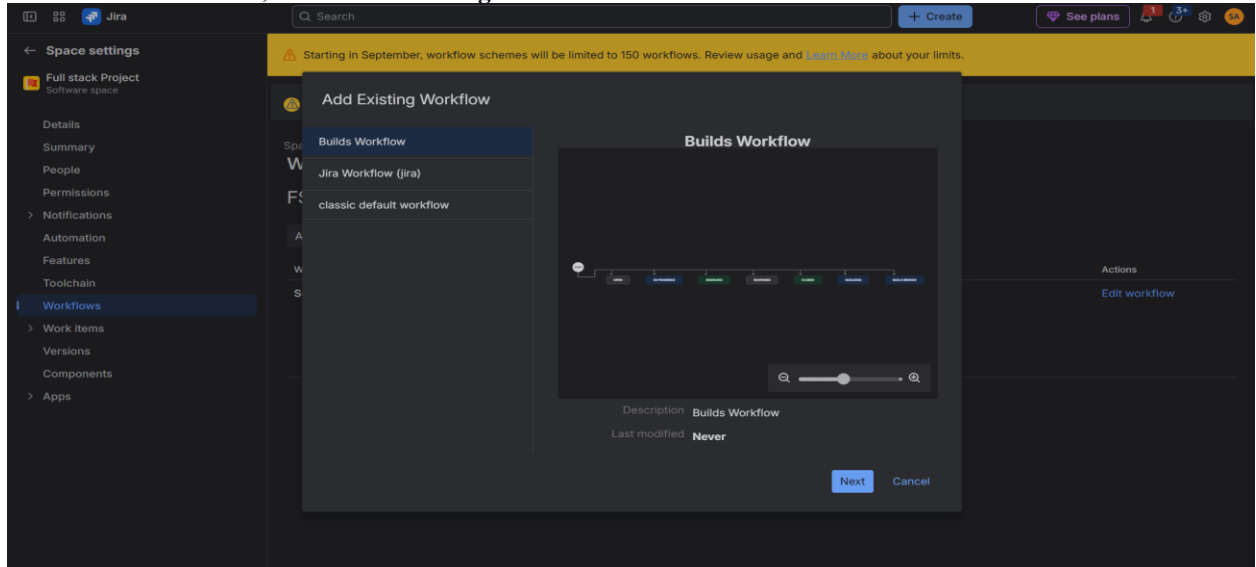

Steps

1. Navigate to Space settings → **Workflows**.

The screenshot displays the Jira interface. The top navigation bar includes a search bar, a '+ Create' button, and a 'See plans' button. The left sidebar shows the 'Spaces' section with a list of spaces, including 'Full stack Project' and 'FSP board'. A context menu is open over the 'FSP board', showing options like 'Add to starred', 'Add people', 'Save as template', 'Create a plan with this space', 'Set space background', 'Space settings', 'Archive space', and 'Delete space'. The main content area shows the 'FSP board' in 'Kanban board' view. Below the board, there is a 'Space settings' section with a 'Workflows' tab selected. The 'Workflows' section shows a 'Draft' workflow named 'FSP: Software Simplified Workflow Scheme'. A table lists the work types and their associated actions:

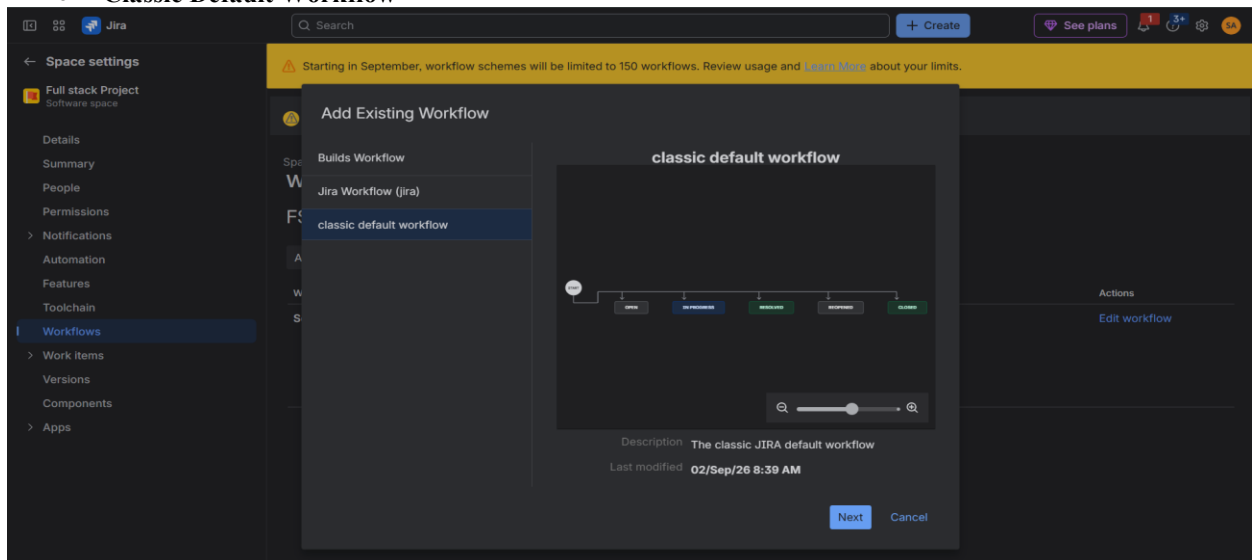

Work Types	Actions
Epic	Edit workflow
Bug	
Story	
Task	
Sub-task	

2. To add a new workflow, select **Add Existing Workflow**.

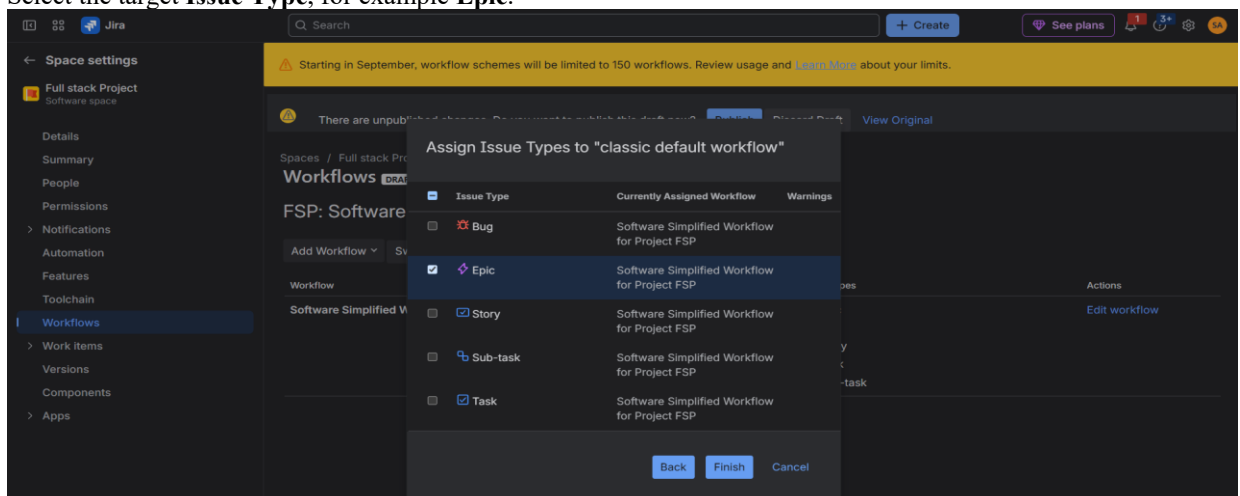

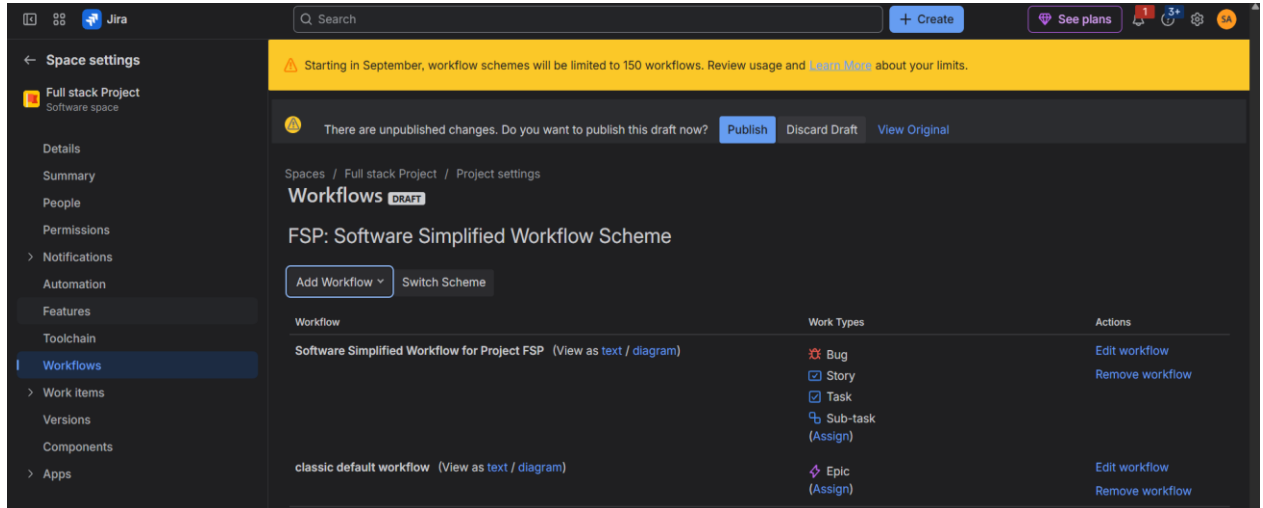

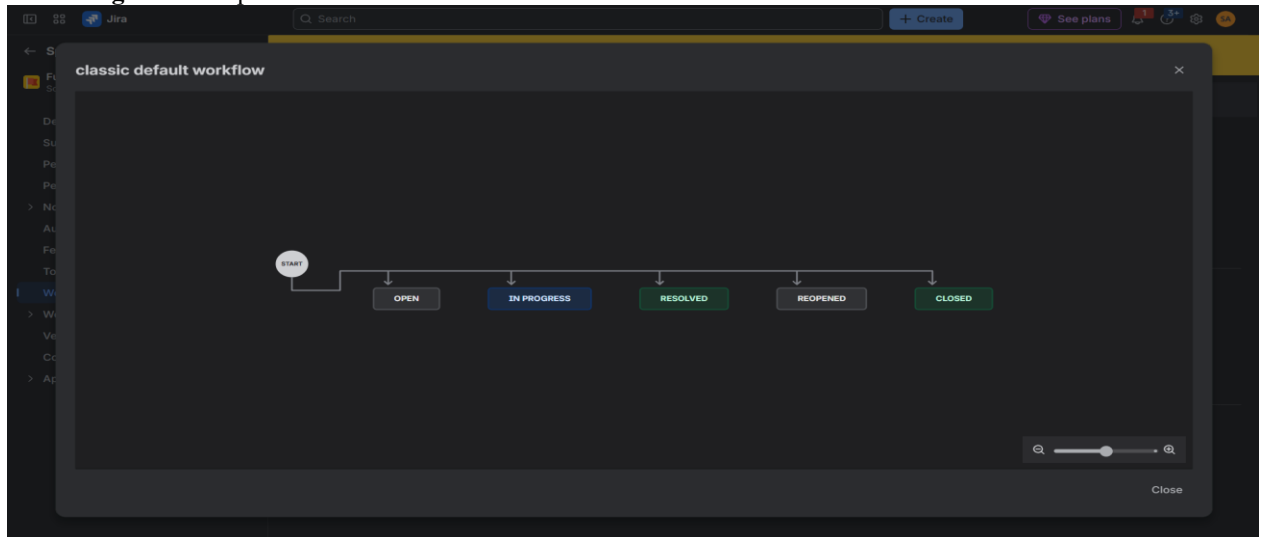

3. Choose a suitable workflow template, such as:

○ **Classic Default Workflow**

4. Click **Next**.
5. Select the target **Issue Type**, for example **Epic**.

6. Click **Finish**.7. Click **Diagram** to inspect the workflow flow and its statuses.**Result**

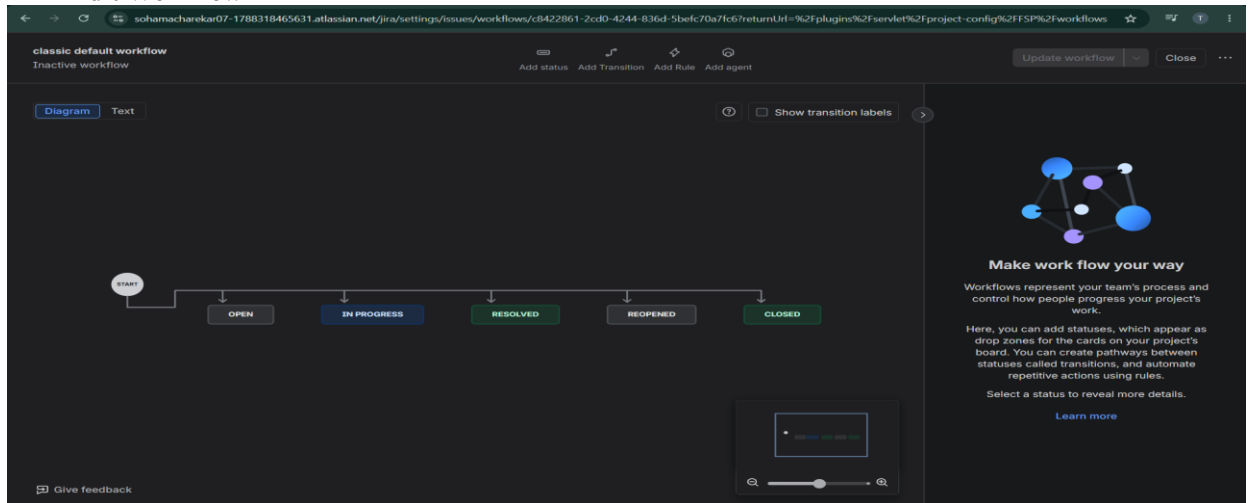

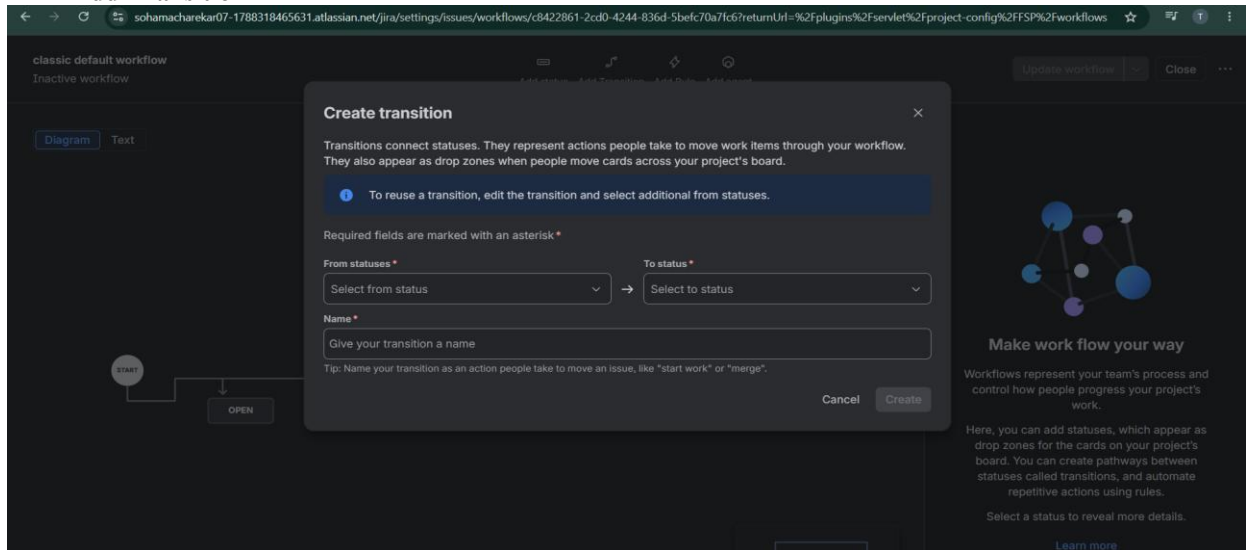

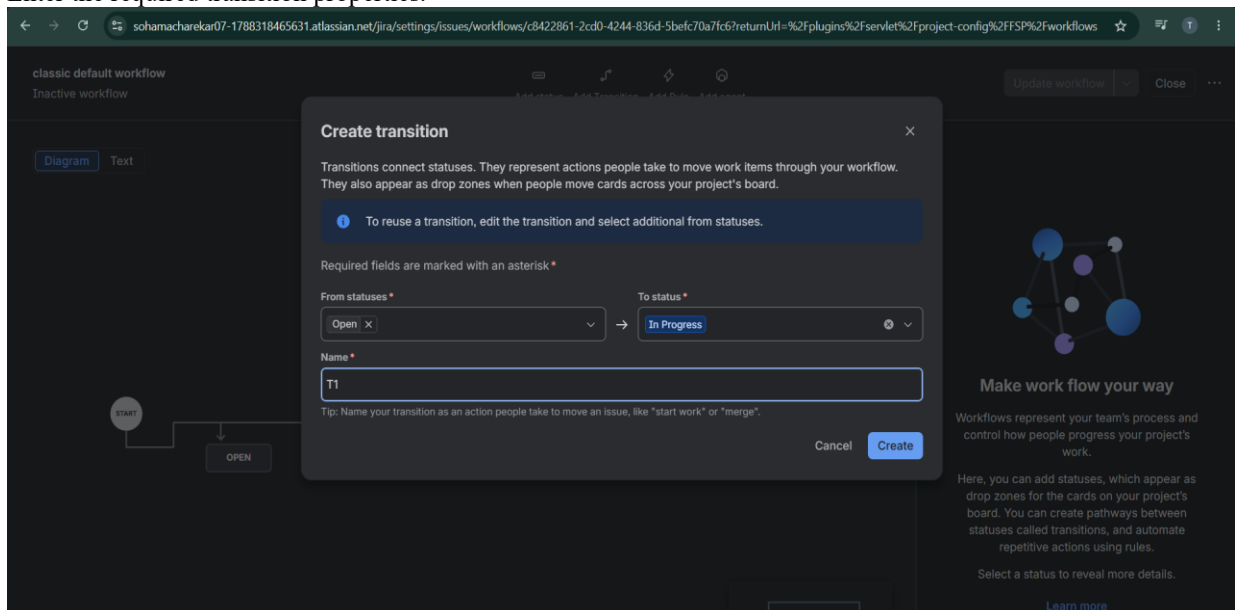

A workflow was successfully added and associated with the selected issue type.

Practical 5-B: Add Transitions and Conditions**Objective**

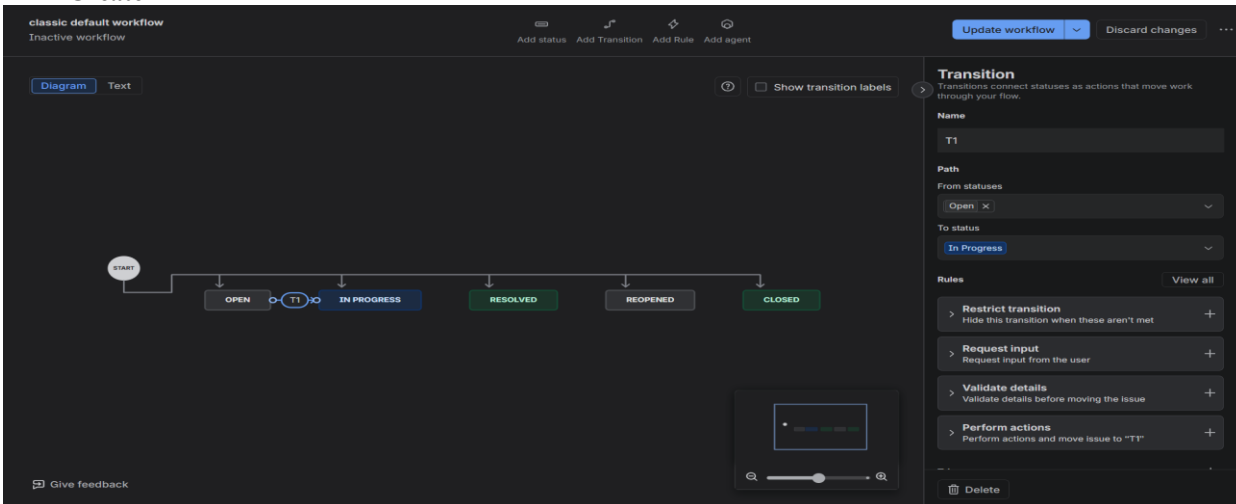

To configure transitions between issue statuses and add rules or conditions to control issue movement.

Theory

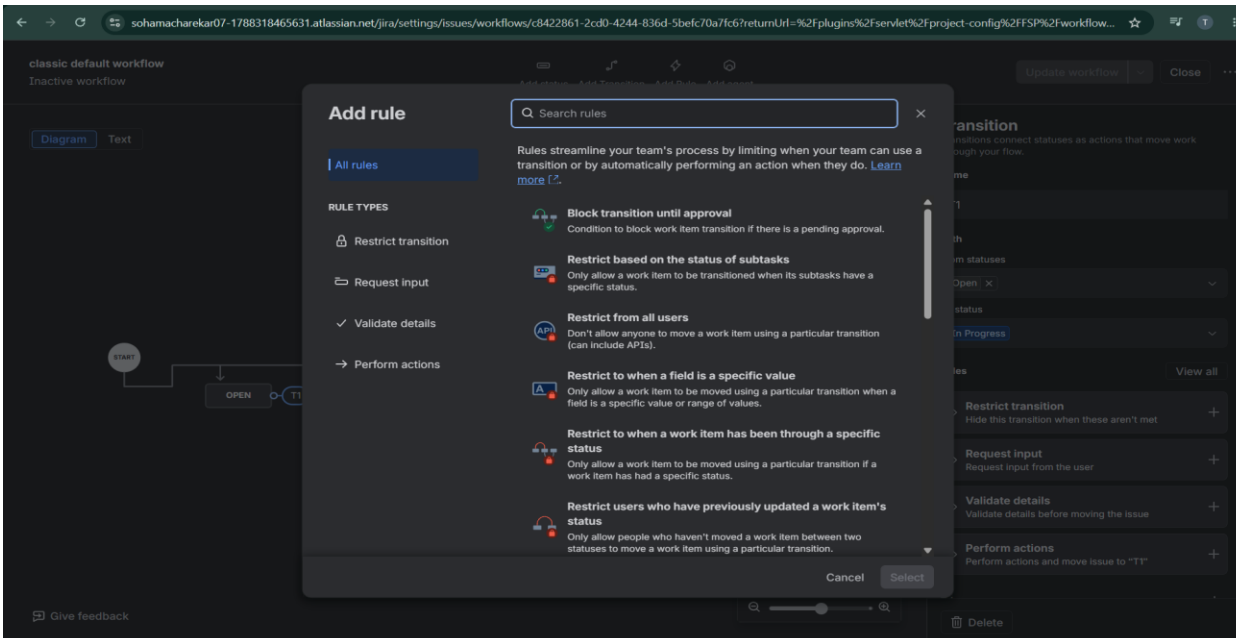

Transitions define how an issue moves from one status to another. Conditions or rules can be added to control when a transition is allowed.

Steps**1. Click Edit Workflow.****2. Click Add Transition.****3. Enter the required transition properties.**

4. Click Create.

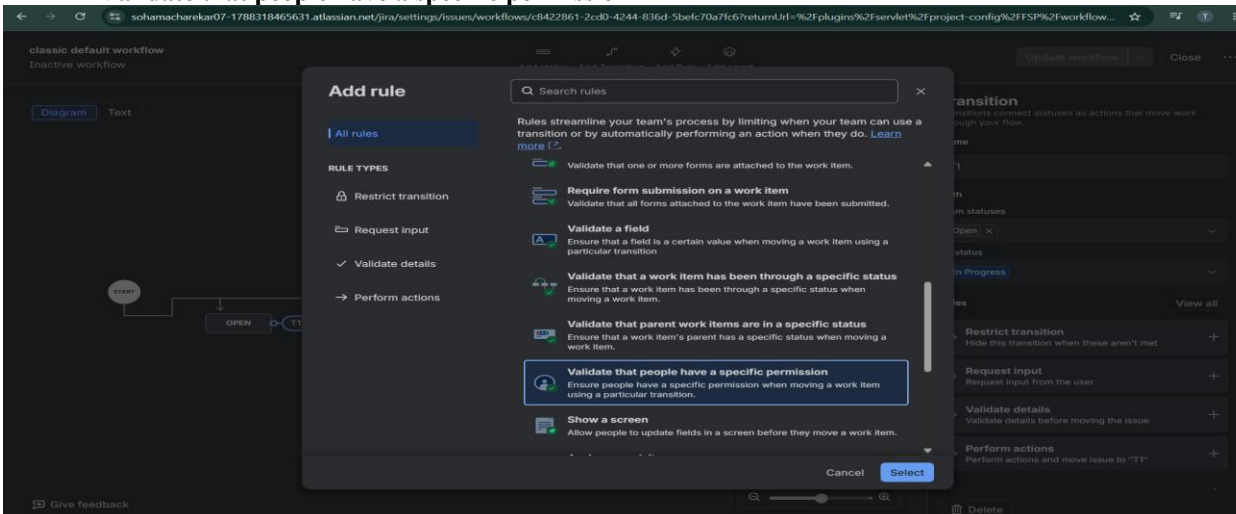

5. Click Add Rule to add conditions.

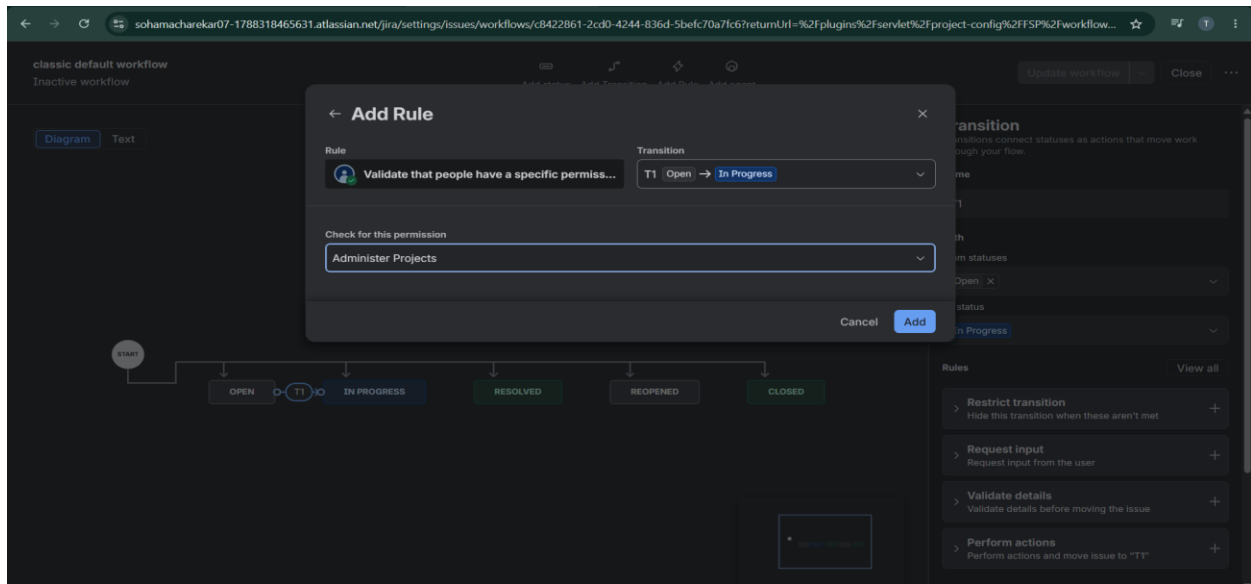

6. Specify the required condition or validator, such as:

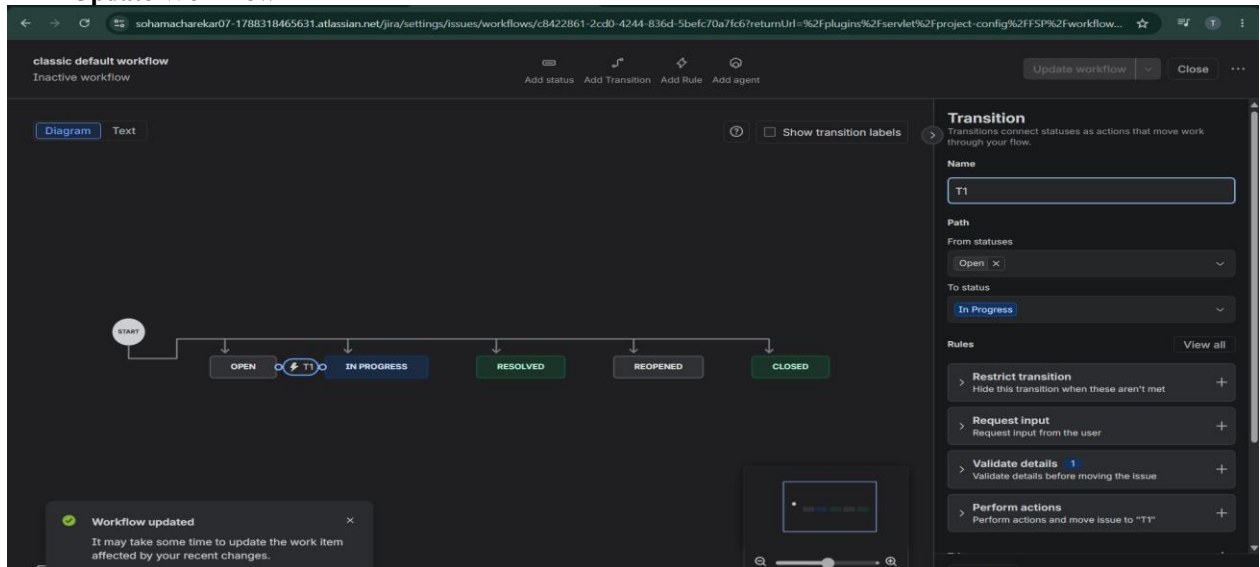

- **Validate that people have a specific permission**

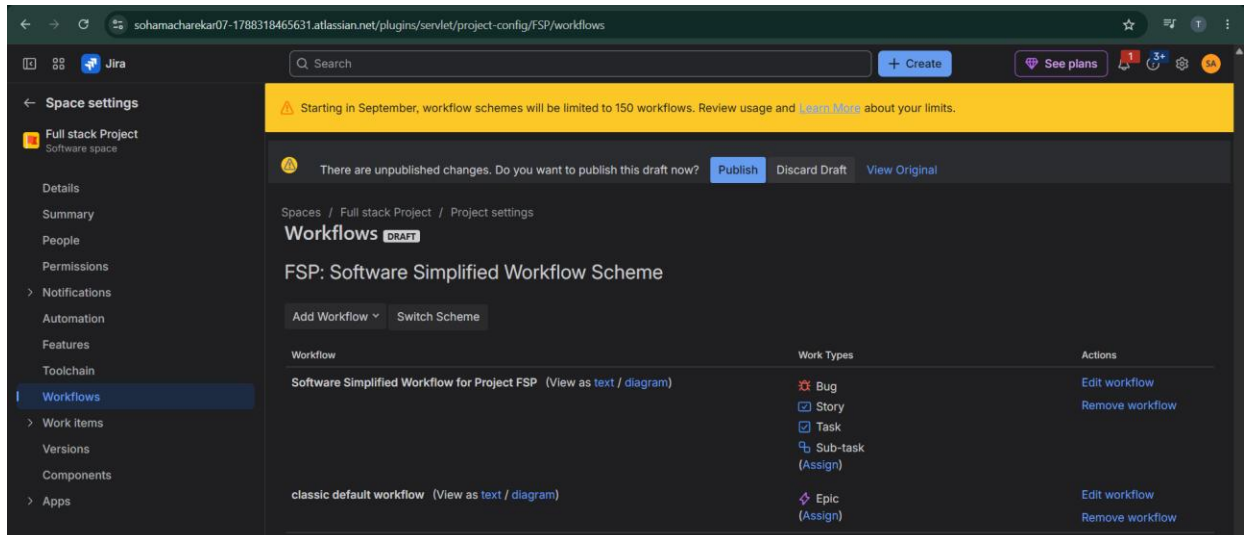

7. Click **Select** → **Add**.

8. Click **Update Workflow**.

9. Close the workflow and return to the **Workflows** screen.

Result

Transitions and required rules were successfully added to the workflow.

Practical 5-C: Publish and Associate Workflow with a Project

Objective

To publish the customized workflow and associate it with the project.

Theory

After designing and updating a workflow, it must be **published** and associated with the required project or issue types so that the changes can be applied.

Steps

1. Click **Publish** on the workflow scheme header.

The first screenshot shows the Jira 'Workflows' page for the 'Full stack Project' (Software space). A yellow banner at the top indicates a limit change starting in September. A message states: 'There are unpublished changes. Do you want to publish this draft now?' with buttons for 'Publish', 'Discard Draft', and 'View Original'. The 'Publish' button is highlighted. Below, the 'Workflows' section shows the 'FSP: Software Simplified Workflow Scheme' in draft status. A table lists the workflow types and their associated actions:

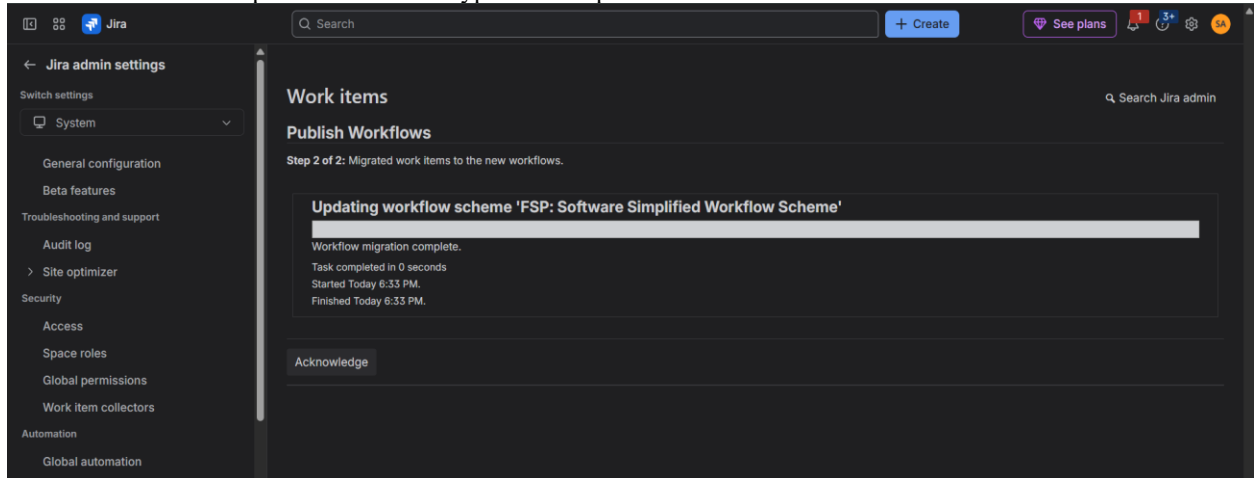

Workflow	Work Types	Actions
Software Simplified Workflow for Project FSP (View as text / diagram)	Bug Story Task Sub-task (Assign)	Edit workflow Remove workflow
classic default workflow (View as text / diagram)	Epic (Assign)	Edit workflow Remove workflow

The second screenshot shows the 'Jira admin settings' page, specifically the 'Work items' section. The 'Publish Workflows' step 1 of 2 is displayed, with the instruction: 'The current status of each work item needs to be changed so that it is compatible with the new workflows.' A table shows the mapping of work item types to their current and new statuses:

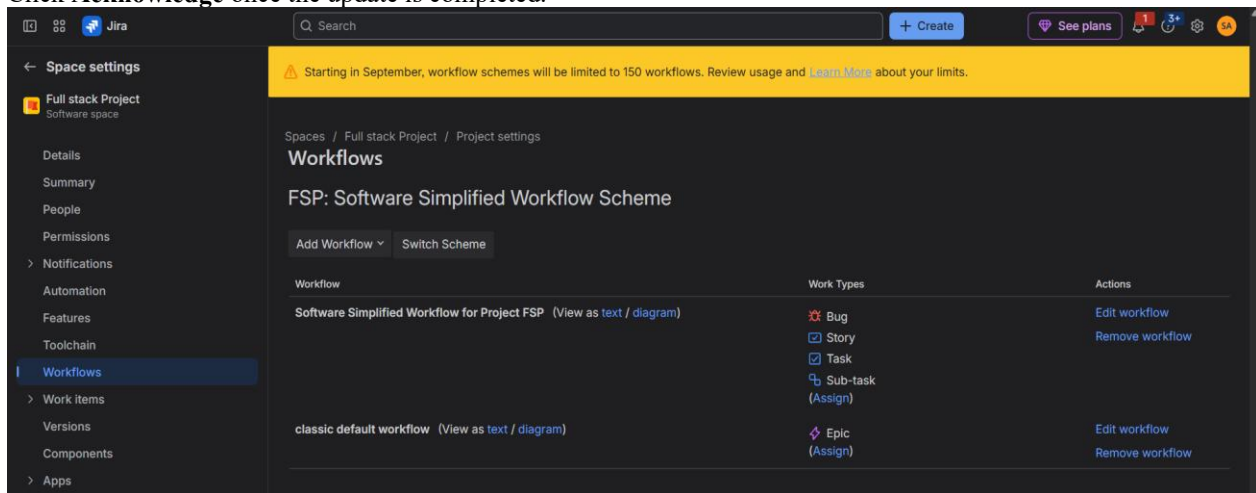

Work Type	Current Status	New Status
Epic	Software Simplified Workflow for Project FSP	classic default workflow
	BACKLOG	Open
	SELECTED FOR DEVELOPMENT	Open
	DONE	Open

At the bottom, there are 'Associate' and 'Cancel' buttons.

2. Select **Associate** to map the current issue types to the updated workflow.

3. Wait for the workflow scheme update process to complete.
4. Click **Acknowledge** once the update is completed.

Result

The customized workflow was successfully published and associated with the project.

Conclusion

The Jira workflow was successfully customized by adding a workflow, configuring transitions and conditions, and publishing and associating the workflow with the project.
